

# Transition to a .GOV domain and help minimize cyber threats in New Hampshire.

**.GOV domain means you're official and trustworthy.**

## The threat to our nation and critical infrastructure is real.

- ▶ The average cost of a data breach in the United States is \$9.36 million per breach incident.
- ▶ The total dollar value loss from cybercrimes in New Hampshire was \$27.2 million in 2023.
- ▶ Websites and email addresses that end in .GOV are trusted and official sources of information. They belong only to approved, vetted and official government entities.

*"Using a NH.GOV domain is the easiest way for an organization to protect itself from impersonators and data breaches."*

— Ken Weeks, NH CISO

**Municipal leaders are responsible for helping safeguard their organizations and communities from cybersecurity threats.**

**FREE grant services from The Overwatch Foundation provide everything you need to migrate to a .GOV today!**
