1. Introduction

AECOM Technical Services, Inc. (AECOM) has prepared this Hazardous Waste Site/Contamination Inventory and Per and Polyfluoroalkyl Substance (PFAS) Evaluation for four proposed stations and one layover facility, as outlined in AECOM's Scope of Services for the Nashua-Manchester 40818 (Capital Corridor) prepared for the NHDOT dated September 2020.

For the proposed Pheasant Lane Mall Station, proposed Crown Street Station, proposed Bedford/Manchester Station, proposed Manchester Hybrid Station, and the proposed Layover Facility (project limits), database searches were obtained to identify areas with records of hazardous materials or contamination within 1,000 feet of the project limits and landfills within 4,000 feet of the project limits. Additionally, historic aerial photographs, topographic maps and/or Sanborn maps were obtained to evaluate past and current land use, and field surveys of the project area were conducted to observe any physical evidence of contamination or potential contamination sources.

AECOM reviewed select files on the New Hampshire Department of Environmental Services (NHDES) OneStop and PFAS data mapper to identify any sites with records of PFAS sampling and any NHDES requests to sample for any media type (soil, groundwater, surface water) within 1,000 feet of the project limits. This information is included in this report as well as a list of any parcels with potential PFAS contamination concerns.

1.1 Study Limitations

This report and all field data and notes were gathered and/or prepared by AECOM in accordance with the agreed upon scope of work and generally accepted engineering and scientific practice in effect at the time of AECOM's assessment of the project limits. The statements, findings and opinions contained in this report are only intended to give approximations of the environmental conditions at the project limits.

The passage of time may result in changes in technology, economic conditions, site variations, or regulatory provisions, which would render the report inaccurate. Reliance on this report after the date of issuance as an accurate representation of current site conditions shall be at the user's sole risk.

1.1.1 Site-Related Limiting Conditions

The following site-specific limitations were encountered during the course of this assessment:

- AECOM's visual inspection of the proposed stations and layover facility was limited to walking the span of proposed platforms and layover facility. The proposed shared parking area at the proposed Pheasant Lane Mall station were inspected by conducting several traverses across the parking lot. The proposed parking areas for the Bedford/Manchester Station were viewed from the fence line along the northerly abutting access road. AECOM conducted a visual inspection of the paved parking lot (Park and Ride lot) associated with the proposed Crown Street station. AECOM's visual inspection of the proposed layover facility consisted of walking along existing tracks and/or open sandy areas.
- During the visual inspection of the proposed stations and layover facility, many ground surface areas were covered with leaves prohibiting visual inspection of the ground surface. In AECOM's opinion, this site-specific limiting condition is not expected to significantly impact the results of this assessment.
- Many homeless shelters/camps were observed along the proposed Manchester Layover Facility and Hybrid Station locations. For safety purposes, AECOM did not conduct visual inspections in areas where homeless people belongings were observed. In AECOM's opinion, this site-specific limiting condition is not expected to significantly impact the results of this assessment.
- AECOM Pan AM flagger assisted AECOM employees with finding access to the proposed stations and layover facility; however, did not walk the proposed stations or layover facilities. AECOM used maps generated for discussion purposes to identify the locations of the proposed stations and layover facilities. In AECOM's opinion, this site-specific limiting condition is not expected to significantly impact the results of this assessment.

2. Proposed Pheasant Lane Mall Station, Nashua, New Hampshire

2.1 Site Location

The proposed Pheasant Lane Mall Station is located adjacent to the southeast side of the Pheasant Lane Mall, Nashua, Hillsboro County, New Hampshire, approximately 1,300 feet east of the intersection of Middlesex Turnpike and the Route 3 on/off ramps.

According to the Nashua New Hampshire Assessor's Office, the proposed station is a portion of a larger 33.8-acre parcel identified as Parcel A-999. Portions of the project limits extend to Parcels A-733 and A-734. Additionally, the shared parking area for the proposed station is addressed as 445 Middlesex Turnpike, Tyngsboro, Massachusetts and consists of a 5.41-acre parcel of land that is designated Parcel ID 11-34-0. Refer to **Figure 2-1 - Site Location Map** for the general location of the proposed station and to **Figure 2-2 - Site Plan** for details of the proposed station.

2.2 Site Ownership

According to the Nashua, New Hampshire Assessor's Records, the overall parcel for the proposed Pheasant Lane Mall Station is owned by the Boston & Maine Corp. According to the Tyngsboro Assessor's office, the proposed shared parking lot area is owned by Seritage SRC Finance, LLC who purchased the property in 2015. Parcel A-733 is owned by Seritage SRC Finance LLC and Parcel A-734 is owned by May Department Stores.

2.3 Site Visit

Ms. Kristen Galeckas and Ms. Cheryl Cormier with AECOM's Chelmsford, Massachusetts office visited the project limits on December 1, 2021. Ms. Galeckas and Ms. Cormier were escorted to the proposed station location for the site visit by Pan AM representative John LeBlanc. No site-related limiting conditions were encountered during this assessment.

The site visit methodology consisted of walking the proposed station and improvements including parking areas and the portions of the surrounding area. The following section summarize the results of the site visit. The purpose of the site visit was to evaluate the potential for any physical evidence of contamination or potential contamination sources.

During the site visit, no visual evidence of potable water wells, monitoring wells, dry wells, clarifiers, septic tanks, or leach fields was identified within the project limits. Outside of normal discoloration of soils due to railroad use, no visual evidence of discolored soil, water, or unusual vegetative conditions or odors was identified during the site visit. The general layout of the project limits is illustrated on **Figure 2-2 - Site Plan**.

2.4 Surrounding Properties

The properties to the east beyond the railroad tracks consist of wooded areas beyond which is the Merrimack River. Areas to the west consist of Pheasant Lane Mall and associated paved parking areas beyond which is Daniel Webster Highway.

2.5 Site and Area History

Historical information for the project limits and surrounding properties is based on AECOM's review and analysis of the following historical sources:

Aerial photographs dated 1965, 1977, 1980, 1985, 1995, 2006, 2009, 2012, and 2016;

Google Earth photos dated 1998, 2001, 2003, 2018, 2019 and 2020;

and 2012;

Nashua, New Hampshire Assessor online GIS database; and,

Information obtained from previous reports on New Hampshire Department of Environmental Services (NHDES) OneStop database.

According to Environmental Data Resources, Inc. (EDR), Sanborn® Fire Insurance Map coverage is not available for the project limits.

2.5.1 Proposed Pheasant Lane Mall Station

Historical research indicates that the railroad tracks have been present since at least the late 1800s. The shared parking area was occupied by grassy and wooded land with a stream from at least the late 1930s until the construction of the Pheasant Lane Mall in 1986. The project limits have remained in the same general configuration since that time. No onsite historical sources of concern were identified in review of historical documents.

2.5.2 Surrounding Properties

Areas to the north, south and west consisted of grassy and wooded land with a stream from at least the late 1930s until 1985 at which time the area appears as reworked land. The mall was developed in 1986 and has remained in the same general configuration since that time. To the east beyond the railroad tracks has remained wooded undeveloped land since at least the late 1930s. No offsite historical sources of concern were identified in review of historical sources.

2.6 Database Search

In accordance with the scope of work, a search of various governmental databases was conducted by EDR. The site-specific environmental database report was reviewed to evaluate if soil and or groundwater from on-site and/or off-site sources of concern has the potential to impact the project limits. Acronyms are defined in the EDR report which is included as Appendix A.

2.6.1 Proposed Pheasant Lane Mall Station

The proposed project limits were not identified in the site-specific database report.

2.6.2 Off-site Properties

Three properties as summarized below in Table 1 below, were identified within 1,000 feet of the proposed Pheasant Lane Mall Station listed on contaminant-related databases and summarized below. Additional details for these sites was obtained from the NHDES OneStop database as well as the Massachusetts Department of Environmental Protection (MassDEP) online Waste Site & Reportable Release/Spills Lookup database. Based on AECOM's review of these database listings, none of these sites are expected to present an environmental concern to the proposed Pheasant Lane Mall Station based on their distance, regulatory status (i.e., closed, no violations found), media impacted (i.e., soil only), and/or topographical position from the project limits (i.e., down-gradient or cross-gradient).

Table 1
Summary of Contaminated Sites Within 1,000 Feet of
Proposed Pheasant Lane Mall Station
Nashua, New Hampshire and Tyngsboro, Massachusetts

EDR ID	Name/Address	Database	Dist/Direction	Comments
1	Pheasant Lane Mall	Leaking Underground Storage Tank (LUST), UST, Spills	450 ft northwest, upgradient	<p>NHDES #198404009: Diesel tank removed from mall during development. Contaminated groundwater and free gasoline product encountered on the southwestern portion of mall site in April 1985. The source of gasoline was determined to be from an adjacent Sunoco gasoline station. Groundwater recovery and treatment system was installed to remediate groundwater. NHDES closed this LUST May 1995. The Sunoco Station is located in Massachusetts. The MassDEP issued Release Tracking Number (RTN) 2-0814. Additional information is discussed below.</p> <p>A 510-gallon diesel UST installed in 1985 was removed in 1997. Post-excavation soil samples were below detection limits (BDL) for total petroleum hydrocarbons (TPH).</p> <p>In 2011, the mall owner responded to a NHDES comment letter. The letter requested a well inventory and if identified, wells should be decommissioned. On behalf of Simon Property Group, TRC Environmental Solutions (TRC) conducted research and a well survey and identified 87 monitoring wells had been installed on the mall property of which six were identified during a site visit. TRC indicated that the wells appeared to be properly closed. All other wells appeared to have been paved over, decommissioned, or destroyed.</p> <p>Spill - December 1998 - 200-gallons of diesel from a generator located between Macy's and JC Penny impacted asphalt and soil. Clean Harbors was retained to remediate the spill. Case closed.</p> <p>Spill - February 2013 - release of trace amount of non-PCB transformer oil to concrete. Spill remediated. Case closed.</p> <p>Spill - June 2013 - weeping transformer. PSNH removed and replaced transformer. Case closed.</p> <p>Spill - March 2016 - weeping transformer. Eversource applied speedi dry on concrete and removed/replaced transformer Case closed.</p>
14	Smokey Bones Restaurant, 431 Middlesex Rd., Tyngsboro	State Hazardous Waste Site (SHWS), Release	960 ft southwest, cross-gradient	<p>On December 2, 2002, a line fuel line ruptured on a truck resulting in a release of 15 gallons diesel to the parking lot. The spill was remediated and closed with a Class A-2 Response Action Outcome (RAO) in February 2003.</p>
17	State Line Sunoco (frm),	LUST, Release	1,250 ft west, upgradient	<p>The site listed as a Confirmed Disposal Site on January 17, 1991. The site operated as a gasoline auto repair facility from 1943 to 1985. Five gasoline USTs were removed in</p>

Table 1
Summary of Contaminated Sites Within 1,000 Feet of
Proposed Pheasant Lane Mall Station
Nashua, New Hampshire and Tyngsboro, Massachusetts

EDR ID	Name/Address	Database	Dist/Direction	Comments
	451 Middlesex Rd., Tyngsboro			<p>1985. An air sparge and soil vapor extraction system (AS/SVE) system was installed at the in 1993 under an Interim Measure. The SVE system commenced operations in September 1994 and the AS system was activated in January 1996. The AS/SVE system was operated until April 2001 when the system was deactivated due to low influent concentrations and based on the results of Phase II investigation activities.</p> <p>A Phase II Comprehensive Site Assessment, a Phase III Remedial Action Plan and Phase IV Remedy Implementation Plan were submitted to MassDEP on July 13, 2001 by Groundwater and Environmental Services, Inc. of Westford, Massachusetts (GES) on behalf of Sunoco in accordance with Administrative Consent Order (Reference No. ACO-CE-01-3007). The Phase II concluded that a condition of No Significant Risk had been achieved with respect to site soil and no Imminent Hazards existed at the site.</p> <p>The Phase II concluded that a condition of No Significant Risk had not been achieved with respect to site groundwater and further Comprehensive Response Actions were required. The Phase III concluded that monitored natural attenuation (MNA) was the remedial alternative most likely to achieve a Permanent Solution at the site and the Phase IV provided a plan for implementation of MNA. A Class C RAO was filed in December 2001. Periodic groundwater sampling was conducted upon the completion of the Class C RAO.</p> <p>A Method 3 Risk Characterization and Class A RAO were prepared in 2004. Petroleum volatile petroleum hydrocarbons (VPH) and extractable petroleum hydrocarbons (EPH) in soil and VPH in groundwater were present above background levels. Based on the risk characterization, a level of no significant risk of harm to human health, public welfare, or the environment existed. Based on site plans reviewed, the extent of impacts did not extend to the extent of the project limits.</p>

2.7 Landfills

AECOM researched landfill facilities located within 4,000 feet of the proposed Pheasant Lane Mall Station. According to the NHDES OneStop and EDR databases, one landfill (noted below in Table 2) is located within 4,000-feet of the proposed station and discussed below. Additionally, according to the EPA's "Methane Outreach Program" no landfills

were identified within 4000 feet of the proposed station. Based on regulatory status, distance and/or topography, the landfill is not considered an environmental concern for the proposed Pheasant Lane Mall Station.

Table 2
Summary of Solid Waste Landfills Within 4,000 Feet of
Pheasant Lane Mall Station

Address	Type	Details	Facility Listing	Distance/Direction
Webster Square Shopping Center	Unlined Landfill, 22 acres, construction and demolition debris	Landfill (LF) beneath building. Quarterly monitoring of LF gas and groundwater sampling under GMP	Facility ID 0000458, NHDES # 198904055	3,000 feet northwest, cross-gradient

3. Proposed Nashua Crown Street, Nashua, New Hampshire

3.1 Site Location

The proposed Crown Street Station is located south of Crown Street, Hillsboro County, New Hampshire. The proposed station is situated approximately one mile southeast of downtown Nashua. Refer to **Figure 3-1 - Site Location Map** for the general location of the proposed station and to **Figure 3-2 - Site Plan** for details of the proposed station.

3.2 Site Ownership

According to the Nashua, New Hampshire Assessor's Records, the proposed Crown Street Station is located on a portion of a 39.3-acre parcel identified as Map 22 Lot 7 and owned by Boston & Maine Corp. The existing parking area, a New Hampshire Park and Ride, is identified as Map 25 Lot 1 and owned by the City of Nashua.

3.3 Site Visit

Ms. Kristen Galeckas and Ms. Cheryl Cormier with AECOM's Chelmsford, Massachusetts office visited the subject property on December 1, 2021. Ms. Galeckas and Ms. Cormier were escorted to the proposed station location for the site visit by Pan AM representative John LeBlanc. No site-related limiting conditions were encountered during this assessment.

The site visit methodology consisted of walking the proposed station and improvements including parking areas and the portions of the surrounding area. The following section summarize the results of the site visit. The purpose of the site visit was to evaluate the potential for any physical evidence of contamination or potential contamination sources.

During the site visit, no visual evidence of potable water wells, monitoring wells, dry wells, clarifiers, septic tanks, or leach fields was identified within the project limits. Outside of normal discoloration of soils due to railroad use and a few minor oil stains on the rocks adjacent to the tracks (~1'x1' area), no visual evidence of discolored soil, water, or unusual vegetative conditions or odors was identified during the site visit. AECOM noted several piles of railroad ties piled along the northern fence line along the rail line. Additionally, AECOM observed a residential fuel oil tank leaning on the fence along the western side of the park and ride lot. No staining was observed on the sidewalk adjacent to this tank at the time of the site inspection. No significant staining was observed associated with the railroad ties. The general layout of the project limits is illustrated on **Figure 3-2 - Site Plan**.

3.4 Surrounding Properties

To the northeast and southeast are railroad tracks beyond which to the northeast to east are Peabody Plumbing Supply, DDG Fabrication, and Coating Systems, Inc. To the southwest and west are residential properties. Make It Labs, a coworking space, and an existing bus layover area are to the northwest.

3.5 Site and Area History

Historical information for the project limits and surrounding properties is based on AECOM's review and analysis of the following historical sources:

Aerial photographs dated 1947, 1952, 1963, 1965, 1977, 1980, 1985, 1992, 1995, 1998, 2006, 2009, 2012, and 2016;

Google Earth photos dated 1992, 2005, 2007, 2008, 2010, 2011, 2013, 2014, 2015, 2018, 2019 and 2020;

Topographic maps dated 1905, 1943, 1953, 1965, 1974, 1985, and 2012;

City Directories dated 1962, 1966, 1992, 1995, 2000, 2005, 2010, 2014, and 2017;

Sanborn Maps dated 1885, 1892, 1897, 1902, 1912, 1949, 1955, 1970, 1974, and 1977;
Nashua, New Hampshire Assessor online GIS database; and,
Information obtained from previous reports on NHDES OneStop database.

3.5.1 Subject Property

The proposed Nashua Crown Street Station has been occupied by railroad tracks since at least the early 1900s. The parking lot portion, currently occupied by a Park and Ride, was historically occupied by a portion of the Gregg & Son manufacturing operation lumber sheds from the late 1800s through between the mid-1950s. By 1970, a building is located along the eastern side of the property in the location of the former sheds which was demolished between 2017 and 2018 and redeveloped as the current park and ride. Additional information pertaining to operations associated with this site are discussed in **Section 3.6.1** below.

3.5.2 Surrounding Properties

Property to the northeast and east was occupied by the Boston and Maine railroad tracks beyond which was Flather & Co Machine Shop from the late 1800s through at least the early 1900s, then the Old Colony Furniture Company from the late 1940s up through at least the mid-1970s. According to city directories this property has been occupied by the following: Electro Mechanism and Cab-Tek, Inc. (1966), L&L Fabricators (1992-1995), Nashua Circuits (1992-2017), Laser and Electron Beam Inc. (1992), NC Drilling, Reclaim Technology (1995), Oak Design Inc. (2000), DDG Fabrication (2005-2017), Razlin Technology, Inc., (2005), and Northeast Plotting Company (2010). The property to the east beyond the railroad tracks was occupied by Nashua Iron/Kameneke Co. Scrap Iron in the 1960s and Coating Systems from the early 1990s through 2017.

Areas to the southwest of the railroad tracks in the southern portion of the proposed station were undeveloped from at least the mid-1940s through mid-1960s. Between the mid-1960s and 1970s, this area was developed as a parking lot with wooded areas beyond which were residential properties.

Areas south of the current park and ride have been occupied by residential properties since at least the early 1900s. Northwest of the project limits was developed with the main portion of the Gregg & Son manufacturing operations and lumber sheds. Between 1995 and 1996, two buildings to the northwest were demolished leaving the one main building (closest to Crown Street) on the property. Historical issues associated with the former Gregg & Sons/Triangle Pacific operations are discussed below. No additional off-site historical uses of concern were identified.

3.6 Database Search

In accordance with the scope of work, a search of various governmental databases was conducted by EDR. The site-specific environmental database report was reviewed to evaluate if soil and or groundwater from on-site and/or off-site sources of concern has the potential to impact the project limits. Acronyms are defined in the EDR report which is included in Appendix B.

3.6.1 Proposed Crown Street Station

The Park and Ride portion of the project limits is a portion of a SHWS/LUST/Brownfield site identified as NHDES #199402011 (Triangle Pacific Corporation, 25 Crown Street). The proposed station portion of the project limits was not identified on any contaminant-related databases.

The LUST is associated with a former 10,000-gallon #6 fuel oil UST that was closed in 1993. The former UST was located abutting the western side of the current Park and Ride. The UST closure report notes that three holes were observed in the tank and impacts to soil were observed. Information obtained from previous reports indicates that approximately 15 yards of impacted soil were removed and that impacted soil appeared to extend beneath the westerly adjacent building. Additional site investigations were conducted in 1994 and fuel oil was encountered up to

20 feet below grade, below the water table, and had migrated along the building footings. A Remedial Action Plan (RAP) was implemented in 1998. Non-aqueous phase liquid (NAPL) was identified in two monitoring wells and trichloroethene (TCE) was detected above ambient groundwater quality standards (AGQS) in one well. Additional sampling was conducted in 2000 and in 2001 and concentrations of TCE were below AGQS. NHDES issued a Certificate of No Further Action letter dated January 16, 2002 for the site in relation to the #6 fuel oil UST release and cleanup.

In 2013, GZA GeoEnvironmental, Inc. (GZA) prepared a Phase I/II Limited Site Investigation for the 25 Crown Street property (Map/Lot 25-1) as well as the land off Gill Street, referred to as Map/Lot 23-1. According to the report, the property was occupied by Gregg & Son, manufacturers of doors, window sashes, blinds, and moldings. The majority of the operations took up Map/Lot 25-1 while Map/Lot 23-1 was used primarily for staging. A warehouse building was constructed on the eastern side of the property on both Map/Lot 25-1 and 23-1 in the late 1960s. In addition to the former 10,000-gallon #6 fuel oil UST discussed above, one 8,000-gallon diesel fuel and one 4,000-gallon Savasol UST were located in the northern portion of Map/Lot 25-1, and one 15,000-gallon Woodlife & Savasol UST and one 4,000-gallon Woodlife UST were located in the southeastern portion of Map/Lot 25-1. Gregg & Son was bought out by Triangle Pacific Corporation (TPC) and TPC was purchased by Armstrong Cabinets in 1998. Unused portions of the mill were demolished in 1995 and 2005 leaving the current Make It Lab building to the northwest of the project limits and the former warehouse building.

GZA installed five groundwater monitoring wells (GZ-1 through GZ-5); four of which were installed in the northern portion of Map/Lot 25-1 and one (GZ-5) which was installed at the eastern-extent of Map/Lot 25-1, east of the warehouse building near a former 4,000-gallon Woodlife concentrate UST. Soil observed during the drilling consisted of urban fill of varying thicknesses that consisted of sand and gravel mixed with varied amounts of crushed concrete, brick, coal and slag. Urban fill was underlain generally by fine to medium dense sand and gravel layer over very loose to medium dense brown sand. Depth to groundwater was approximately 13 to 19 feet below grade. Groundwater flow was determined to be in an easterly direction toward the Merrimack River.

Soil and groundwater samples were collected and analyzed for volatile organic compounds (VOCs), TPH and metals. No VOCs, TPH or metals were identified above AGQS in any of the samples analyzed.

During geotechnical and environmental investigations conducted by GZA in 2016, concentrations of tetrachloroethylene (PCE) and TCE were detected above AGQS in groundwater monitoring wells northwest of the proposed station. Sanborn, Head and Associates, Inc. (SHA) reported the exceedance to NHDES along with a work plan for additional investigations.

Additional monitoring wells were installed in June 2017 as part of an Initial Response Action Report prepared by SHA. Depth to groundwater ranged between 14 and 21 feet below ground surface. Groundwater flow direction was determined to be east-northeast toward the Merrimack River. Concentrations of VOCs were detected in groundwater samples below AGQS. The report concluded that with the development of the site as a Park and Ride nearly complete, concentrations below AGQS, no private drinking water wells in the vicinity and downgradient of the site, and detections of TCE below NHDES Groundwater to Indoor Air Screening Level (GW-2) of 20 micrograms per liter ($\mu\text{g/L}$), the risk to potential receptors by ingestion or vapor intrusion is unlikely and no additional investigations were recommended. The NHDES requested additional groundwater sampling as VOCs were present above laboratory detection limits and the potential for an intermittent source not previously identified. Due to construction activities, several monitoring wells were decommissioned in August 2017.

In AECOM's opinion, based on regulatory status (active), proximity and CVOC impacts to groundwater, this SHWS is considered a potential concern for the proposed Crown Street Station.

3.6.2 Off-Site Properties

Based on AECOM's review, six properties were identified within a 1,000-foot radius of the project limits listed on a contaminant-related database and are summarized below (see Table 3 below). Additional details for these sites was

obtained from the NHDES OneStop database. Some sites may fall under additional regulatory tracking databases which are included in the database list but not discussed in the comment section.

Table 3
Summary of Contaminated Sites Located within 1,000 Feet of the
Proposed Crown Street Station, Nashua, New Hampshire

EDR ID	Name/Address	Databases	Dist/Direction	Comments
13/14/15	49, 51, AND 55 Gillis St.	ALLSITES	270 feet southwest, cross-gradient	<p>NHDES # 200410086, # 200410088, and # 200410087, respectively as asbestos disposal sites (ADS). According to information obtained from OneStop, the property owners at these properties were notified that their properties were identified as ADSs in 1988. NHDES personnel conducted an inspection in 1993 and identified non-friable asbestos transite plate waste on the ground surface and recommended removal of the material. Additional correspondence with NHDES indicates that the waste was associated with a retaining wall at 130 Bowers Street. Both files for 49 and 51 Gillis Street had no additional information and are listed as inactive.</p> <p>In 2011, a work plan was provided to NHDES to remove the transite plate waste identified at 55 Gillis Street and install a cap. The work plan was approved in August 2013. According to the Asbestos Disposal Site Reporting Form, the asbestos was covered in accordance with Env-Sw-2104.03 and the site was subject to an Activity and Use Restriction (AUR). A geotextile fabric was covered with 6-8 inches of soil, a stone swale created at the top of slope to reduce runoff, and area seeded. These sites are listed as inactive. In AECOM's opinion, based on regulatory status, these sites are not considered an environmental concern to the proposed Crown Street Station.</p>
25	Robert Voyer, 26 Arlington St.	ALLSITES	880 feet, southwest, cross-gradient	<p>NHDES #199507013. According to information obtained from NHDES OneStop, on July 18, 1995, a release of 175 gallons of #2 fuel oil occurred in the basement as a result of a broken fuel line of an aboveground storage tank (AST). Additionally, kerosene was placed throughout the home to act as a fire accelerant, and the house was burned. Excess water accumulated in the basement as a result of the fire response was removed from the basement. Soil samples were collected from beneath the foundation and analyzed for VOCs and TPH. Low concentrations of VOCs and TPH were present in the soil samples analyzed. Attempts were made to analyze groundwater; however, groundwater was not encountered to depths of up to 13 feet below grade. This site was closed by NHDES in September 1996. In AECOM's opinion, based on distance and regulatory status, this site is not considered to pose an environmental concern for the proposed Crown Street Station.</p>

Table 3
Summary of Contaminated Sites Located within 1,000 Feet of the
Proposed Crown Street Station, Nashua, New Hampshire

EDR ID	Name/Address	Databases	Dist/Direction	Comments
26	Shell Service Station, 119 E. Hollis St. Adam Warren Shell	SHWS, UST EDR Hist Auto RCRA NonGen, Manifest	820 ft north-northwest, upgradient	NHDES #200006009. During a June 2000 Phase I investigation, groundwater samples were found to contain concentrations of TCE above AGQS. This property operated as a retail gasoline station and auto repair facility since the late 1950s. Three monitoring wells were installed and soil and groundwater samples were collected for analysis. Low concentrations of petroleum VOCs were detected in soil below standards. Only TCE in groundwater was found above standards. The TCE was reportedly due to an off-site source. NHDES issued a Certificate of No Further Action in June 2000. In AECOM's opinion, based on distance and regulatory status, this site is not considered to pose an environmental concern for the proposed Crown Street Station.
39	Coating Systems, 55 Crown St. Solvol Engineer American Automatic	CORRACTS, RCRA-TSD, RCRA-VSGQ, Inst. Control, 2020 Cor Action, RAATs, PADS, ICIS, FTTS, HIST FTTS, FINDS, ECHO, RCRA NonGen/NLR, UST, SHWS, ALLSITES, NPDES, RCRA NonGen/NLR EDR Hist Auto	340 feet east, downgradient	NHDES# 198403097. The SHWS, Inst. Controls, ALLSITES are listed as closed and/or inactive. No additional information pertaining to these listings were available from NHDES OneStop or the Hillsboro County Registry of Deeds. The National Pollutant Discharge Elimination System (NPDES) listing is inactive. The UST listing is associated with a 2,000-gallon gasoline UST installed in 1956 and permanently closed in 1988. The Corrective Action (CORRACTS) listing was applied to the entire facility. Violations were noted associated with the Resource Conservation and Recovery Act-Treatment, Storage and Disposal Facility (RCRA TSDF) and very small quantity generator (VSQG) listings with compliance achieved. The RCRA Administration Action Tracking System (RAATS) listing indicates final consent agreement/final order issued October 13, 1981. According to information obtained from USEPA, the facility achieved a "Remedy Construction Complete" determination on August 6, 2001. Groundwater mitigation was under control by September 1999 and Corrective Action Process Terminated in 2004. In AECOM's opinion, based distance, downgradient location, and regulatory status, this site is not considered to pose an environmental risk for the proposed Crown Street Station.
44/45	128 & 130 Bower St.	ALLSITES	870 feet south-southwest, cross-gradient	NHDES # 200410094. These listings are associated with the ADS listings for 49, 51 and 55 Gillis Street and are inactive. In AECOM's opinion, based on regulatory status and distance, these properties are not considered to pose an environmental concern for the proposed Crown Street Station.

**Table 3
Summary of Contaminated Sites Located within 1,000 Feet of the
Proposed Crown Street Station, Nashua, New Hampshire**

EDR ID	Name/Address	Databases	Dist/Direction	Comments
71	Roussel Park, Haines St.	PFAS, SWL/LF, ALLSITES	300 ft southwest, cross-gradient	NHDES #200202018. The facility is an inactive ADS. Based on the 2020 Periodic Status Report and Groundwater Management Permit Renewal report reviewed on NHDES OneStop, this park was formerly operated as a municipal solid waste landfill used by the City through the mid-1960s, was capped with soil, and ballfields/soccer fields were constructed on the cap. The cap was reconstructed in 2002 which included the removal of asbestos-containing materials, installation of landfill gas collection system, and placement of a new capping system. Depth to water in an overburden well was measured at approximately 40 feet below grade and groundwater flow determined to be in an easterly direction toward the Merrimack River. Concentrations of several PFAS compounds were detected in a bedrock monitoring well, and concentrations of arsenic in bedrock wells, manganese in bedrock wells, and PFOA in bedrock and overburden wells were detected at the downgradient groundwater management zone (GMZ). Concentrations of PFAS were below established AGQS. Previous groundwater sampling for VOCs completed in 2018 did not identify any VOCs above AGQS. In AECOM's opinion, based on distance and inferred cross-gradient location, this site is not considered to pose an environmental concern for the proposed Crown Street Station

3.7 Landfills

AECOM researched landfill facilities located within 4,000 feet of the subject property. According to the EDR report and information obtained from NHDES OneStop, six properties were identified on the SWL/LF database within 4,000 feet of the proposed Crown Street Station (see Table 4 below). Information from these resources is summarized below. In AECOM's opinion, based on distance, groundwater flow, and or status, none of these landfills are considered to pose an environmental concern for the proposed Crown Street Station.

**Table 4
Summary of Landfills Within 4,000 Feet of Proposed Crown Street Station
Nashua, New Hampshire**

Address	Type	Details	Facility Listing	Distance/Direction
Maine Manufacturing, 46 Bridge St	Former ADS	Former ice box company in the 1880s and stopped being used as dump in 1981. Tin, coal, tar and drum waste paint were found.	SWL/LF Facility ID 0002906, NHDES # 1998060617	1,250 feet north- northwest, cross- gradient

Table 4
Summary of Landfills Within 4,000 Feet of Proposed Crown Street Station
Nashua, New Hampshire

Address	Type	Details	Facility Listing	Distance/Direction
50 Bridge St	ADS	Waste extended into Nashua River included asbestos and coal tar. Stabilization of sediment in place.	SWL/LF Facility ID NHDES #200410126	1,250 feet north-northwest, cross-gradient
Energy North, 38 Bridge St	ADS/MGP	Approved permit for Peniel Asbestos Storage at Liberty Utilities 11.5.20. Impacts in groundwater above AGQS as of April 2021 include benzene, ethylbenzene, toluene, 1,2,4-trimethylbenzene (TMB), naphthalene, cyanide, arsenic, 2-methylnaphthalene, styrene, and TCE. Groundwater flow south to Nashua River.	SWL/LF Facility ID 0003119 and 0003129, NHDES ADS/HW program #199810022	1,760 feet northwest, cross-gradient
95 Canal Street/BAE Systems Electronics	SWF/LF – not operating, ADS	Buried asbestos.	SWF/LF Facility ID 0002997	2,870 feet northwest, Cross-gradient
Roussel Park	ADS/PFAS	Former municipal landfill 1969, capped 2003. Former ADS. Groundwater flow east toward Merrimack River. As of 2020 sampling, manganese, arsenic, PFOA above AGQS.	NHDES #2002020218, SWL/LF Facility ID 0002813	300 feet southwest, cross-gradient
Atherton Park, Atherton Avenue	SWF/LF	Atherton Park Landfill pre-1981.	SWF/LF Facility ID 0002814. NHDES # 200206014	3,700 feet northwest, cross-gradient

4. Proposed Bedford/Manchester Station, Somerville Drive, Bedford, New Hampshire

4.1 Site Location

The proposed Bedford/Manchester Station is located at the east side of Somerville Drive in Bedford, Hillsboro County, New Hampshire. The proposed station is situated approximately 2,600 feet east of the intersection of Raymond Wieczorek Drive and the Everett Turnpike. The proposed Bedford/Manchester Station is accessed from Somerville Drive to the west. Refer to **Figure 4-1 - Site Location Map** for the general location of the proposed station and to **Figure 4-2 - Site Plan** for details of the proposed station.

4.2 Site Ownership

According to the Bedford, New Hampshire Assessor's Records, the proposed station is located on a portion of a 23.48-acre lot identified as Map 24 Lot 16 and owned by Boston & Maine Corp. The proposed parking and overflow parking lots are on a portion of Map 36, Lot 11 that is owned by the State of New Hampshire.

4.3 Site Visit

Ms. Kristen Galeckas and Ms. Cheryl Cormier with AECOM's Chelmsford, Massachusetts office visited the project limits on December 1, 2021. Ms. Galeckas and Ms. Cormier were escorted to the proposed station location for the site visit by Pan AM representative John LeBlanc. No site-related limiting conditions were encountered during this assessment.

The site visit methodology consisted of walking the proposed station and improvements including parking areas and the portions of the surrounding area. The following section summarize the results of the site visit. The purpose of the site visit was to evaluate the potential for any physical evidence of contamination or potential contamination sources. The proposed parking areas were observed from the fence line along the northern abutting access road.

During the site visit, no visual evidence of potable water wells, monitoring wells, dry wells, clarifiers, septic tanks, or leach fields was identified within the project limits. Outside of normal discoloration of soils due to railroad use, no visual evidence of discolored soil, water, or unusual vegetative conditions or odors was identified during the site visit. AECOM observed solid waste dumping in the form of pieces of wood, and furniture beneath the bridge adjacent to the railroad tracks. No significant staining was observed associated with the discarded items at the time of the site inspection. The general layout of the project limits is illustrated on **Figure 4-2 - Site Plan**.

4.4 Surrounding Properties

The proposed Bedford/Manchester Station is located in a commercial and residential section of Bedford, New Hampshire. The proposed station is bordered to the northeast and southeast by undeveloped land beyond which is the Merrimack River. To the south-southwest is undeveloped land beyond which are Crestwood Drive and residential properties. To the west are on/off ramps associated with Raymond Wieczorek Drive. To the northwest are Somerville Drive, UHaul, and a utility company with aboveground propane tanks.

4.5 Site and Area History

Historical information for the project limits and surrounding properties is based on AECOM's review and analysis of the following historical sources:

Aerial photographs dated 1947, 1952, 1960, 1965, 1977, 1985, 1992, 1998, 2006, 2009, 2012, and 2016;

Google Earth photos dated 1992, 1998, 2003, 2006, 2008, 2009, 2011, 2014, 2018, and 2019;

Topographic maps dated 1905, 1941, 1943, 1953, 1968, 1974, 1985, and 2012;

City Directories dated 2000, 2005, 2010, 2014, and 2017;

Bedford, New Hampshire Assessor online GIS database; and,

Information obtained from previous reports on New Hampshire Department of Environmental Services (NHDES) OneStop database.

According to EDR, Sanborn® Fire Insurance Map coverage is not available for the project limits.

4.5.1 Project Limits

Historical research indicates that the railroad tracks have been present since at least the early 1900s. The proposed station area was occupied by grassy and wooded areas from at least the mid-1940s. By the mid-1980s, a commercial style structure was constructed in the location of the proposed overflow parking area. According to the Bedford Assessors' information this building appeared to be used as a church (Faith Christian Center). Between 2006 and 2009, construction of Raymond Wieczorek Drive occurred. The church was demolished by 2012 and Raymond Wieczorek Drive opened to the public in 2015. The proposed Bedford/Manchester Station has remained in the same general configuration since that time.

4.5.2 Surrounding Properties

Areas to the east of the proposed station beyond the railroad tracks has consisted of grassy and wooded areas beyond which is the Merrimack River since at least the mid-1940s. Areas to the west were primarily undeveloped grassy land from the mid-1940s. By the early 1950s, Sommerville Drive is present, areas northwest of the proposed station appear to be undergoing earth moving activities and areas to the southwest appear unchanged. According to the 1968 topographic map, the area to the northwest was a sand pit. By the mid-1970s, commercial structures are present to the northwest. By the early 1990s, five aboveground propane tanks are present to the northwest. According to the Assessors' field card, these tanks have a total of 120,000 gallon capacity. Between 2009 and 2012, the commercial buildings to the northwest were demolished and replaced with on- and off-ramps from Raymond Wieczorek Drive. The surrounding properties have remained in the same general configuration since that time.

4.6 Database Research

In accordance with the scope of work, a search of various governmental databases was conducted by EDR. The site-specific environmental database report was reviewed to evaluate if soil and or groundwater from on-site and/or off-site sources of concern has the potential to impact the project limits. Acronyms are defined in the EDR report which is included as Appendix C.

4.6.1 Proposed Bedford/Manchester Station

The project limits were not identified in the site-specific database report.

4.6.2 Off-site Properties

Based on AECOM's review, two properties were identified within a 1,000-foot radius of the project limits listed on a contaminant-related database and are summarized below (Table 5).

Table 5
Summary of Contaminated Sites Within 1,000 Feet of Proposed Bedford/Manchester Station
Bedford, New Hampshire

EDR ID	Name/Address	Databases	Dist/Direction	Comments
1	NHDOT PS 511, 6 Sommerville Rd	LUST, UST, ALLSITE	Approximately 400 west, upgradient	<p>LUST Site # 199702062/ALLSITE #2009020259. According to information provided in the database report and NHDES online OneStop database, one 2,000-gallon kerosene UST was installed in 1980 and removed in 1991 and one 3,000-gallon diesel UST installed in 1989 was removed in March 2010. According to a tank removal report prepared by ATC, dated April 15, 2010, during the diesel tank removal, groundwater was encountered approximately 10 feet below grade. Once the tank was removed, four post-excavation soil samples and one groundwater sample were collected for laboratory analysis. The soil and groundwater samples were analyzed for VOCs, TPH diesel range organics (TPH-DRO), and polycyclic aromatic hydrocarbons (PAHs). Based on analytical data, no VOCs or PAHs were detected in soil samples above laboratory reporting limits. TPH-DRO was detected at concentrations ranging from 14 to 50 milligrams per kilograms (mg/kg) in three of the four soil samples analyzed which was below the NHDES Soil Remediation Standard (SRSs). No VOCs or TPH were detected in the groundwater sample analyzed above standards. Concentrations of several PAHs were detected above AGQS. The ATC report concluded that no significant impacts to groundwater were encountered and requested no additional investigations.</p> <p>ATC prepared an addendum to their initial report dated October 2010 which provided the NHDES with copies of the PAHs gas chromatograms, documentation from the laboratory as well as stating that the low concentrations of PAHs detected in the groundwater were likely attributable to high turbidity of the water sample. NHDES closed this LUST listing on January 4, 2011. No additional information was available regarding the removal of the 2,000-gallon kerosene UST.</p> <p>The ALLSITES (199702062) listing is associated with an Underground Injection Control (UIC). Three floor drains in the buildings bays discharged to a storm drain located approximately 50 feet from the building were closed in place in February 1997. The ALLSITES listing (2009020259) is associated with a release of 10 gallons of hydraulic oil from a dumpster in April 2019. The oil impacted the asphalt and soil surface. The spill was remediated and the spill incident was closed.</p> <p>In AECOM's opinion, based on regulatory status, this site is not considered to pose an environmental concern to the proposed Bedford/Manchester Station.</p>

Table 5
Summary of Contaminated Sites Within 1,000 Feet of Proposed Bedford/Manchester Station
Bedford, New Hampshire

EDR ID	Name/Address	Databases	Dist/Direction	Comments
5	VIP Auto Discount, 445 DWH	LUST, UST	700 ft northwest, cross-gradient	<p>Two 275-gallon used oil USTs and one 6,000-gallon heating oil UST are listed as inactive. According to the information reviewed under the NHDES LUST file (#199706043), the two USTs, as well as soil remediation and groundwater sampling beneath former lifts and service area, and dry well and oil water separator removal were performed between May and July 1997.</p> <p>On June 3, 1997 Total Waste Management Corporation (TWM) cleaned and removed one 500-gallon separator. The location of the dry well area was approximately 500 feet northwest of the proposed station. The dry well was constructed of concrete blocks and stone. Petroleum odor and visual staining was observed in this area. Soil was removed in the area based on petroleum odor, visual staining and photoionization detector (PID) headspace results. Approximately 30 cubic yards of contaminated soil were removed from the area before lower headspace readings were achieved.</p> <p>Two post-excavation soil samples and a groundwater were collected and analyzed for VOCs, PAHs, and TPH. All concentrations were below cleanup standards. NHDES issued closure on April 11, 1997. In AECOM's opinion, based on regulatory status, this site is not considered to pose an environmental concern to the proposed station.</p>

4.7 Landfills

AECOM researched landfill facilities located within 4,000 feet of the project limits. According to the NHDES OneStop database, three landfills are located in Bedford and 14 landfills are located in Manchester. None of these landfills are located within 4,000-feet of the project limits. Additionally, according to the EPA's Methane Outreach Program" no landfills were identified within 4,000 feet of the project limits.

5. Proposed Manchester Hybrid Station, Manchester, New Hampshire

5.1 Site Location

The proposed Manchester Hybrid Station is located at 240 Elm Street, south of Granite Street, Manchester, Hillsboro County, New Hampshire. The proposed station includes a platform area with an eventual bus loop that uses Valley Street and a passenger pick up/drop off area near south of Granite Street along Canal Street.

The proposed Manchester Hybrid Station is situated approximately 800 feet east of the Merrimack River, approximately 1,240 feet northeast of Exit #5 off of Interstate 293. Refer to **Figure 5-1 - Site Location Map** for the general location of the proposed station and to **Figure 5-2 - Site Plan** for details of the proposed station.

Due to the urban nature of the area and the proposed hybrid station with parking to the north near Granite Street and access road to the south from Valley Street, descriptions have been broken up referring to the Granite Street portion and Valley Street portion, where appropriate.

5.2 Site Ownership

According to the Manchester, New Hampshire GIS Map, the proposed Manchester Hybrid Station is a portion of a larger approximately 18.5-acre lot, identified as Map 930 Lot 9, and owned by Boston & Maine Corp. Additionally, parking for the Granite Street portion includes a 0.32-acre lot identified as Map 930 Lot 6, owned by the City of Manchester. The Valley Street portion will include an access road across a parcel identified as Map 930, Lot 1, that is owned by 216 Elm Street Properties LLC.

5.3 Site Visit

Ms. Kristen Galeckas and Ms. Cheryl Cormier with AECOM's Chelmsford, Massachusetts office visited the project limits on December 1, 2021. Ms. Galeckas and Ms. Cormier were escorted to the proposed station location for the site visit by Pan AM representative John LeBlanc. No site-related limiting conditions were encountered during this assessment.

The site visit methodology consisted of walking the proposed station and improvements including parking areas and the portions of the surrounding area. The following sections summarize the results of the site visit. The purpose of the site visit was to evaluate the potential for any physical evidence of contamination or potential contamination sources.

At the time of the site visit, AECOM observed areas of solid waste debris throughout the proposed station as well as piles of solid waste including railroad ties piled along the sides of the proposed station. No staining was observed associated with piles of debris observed by AECOM.

During the site visit, no visual evidence of potable water wells, monitoring wells, dry wells, clarifiers, septic tanks, or leach fields was identified within the project limits. Outside of normal discoloration of soils due to railroad use and a few minor oil stains on the rocks adjacent to the tracks (~1'x1' area), no visual evidence of discolored soil, water, or unusual vegetative conditions or odors was identified during the site visit.

5.4 Surrounding Properties

North of the proposed station is Granite Street beyond which are residential properties. To the east, from north to south, are Canal Street, NBT Bank, Market Basket supermarket, Firestone Auto Care, and wooded land beyond which are St. Mary's Bank and Dunkin Donut coffee shop. To the south are a parking lot and Liberty Utilities. To the west, from south to north, are railroad tracks beyond which are South Commercial Street and Delta Dental Stadium, Hilton Garden Inn, Auto City Collision, Fortitude for Dance and WMUR news station.

5.5 Site and Area History

Historical information for the project limits and surrounding properties is based on AECOM's review and analysis of the following historical sources:

Aerial photographs dated 1947, 1952, 1965, 1977, 1985, 1992, 1998, 2006, 2009, 2012, and 2016;

Google Earth photos dated 2003, 2008, 2011, 2014, 2018, and 2019;

Topographic maps dated 1905, 1941, 1943, 1953, 1968, 1974, 1985, and 2012;

Sanborn maps dated 1885, 1891, 1897, 1915, 1950, 1954, 1971, 1973, 1975, 1983, 1985, 1989;

City Directories dated 1930, 1939, 1944, 1949, 1954, 1959, 1964, 1968, 1973, 1978, 1983, 1988, 1992, 1995, 2000, 2005, 2010, 2014, and 2017;

Manchester, New Hampshire Assessor online GIS database; and,

Information obtained from previous reports reviewed on New Hampshire Department of Environmental Services (NHDES) OneStop database.

5.5.1 Proposed Manchester Hybrid Station

Historical research indicates that the proposed Manchester Hybrid Station has been occupied by railroad tracks since at least the late 1800s. The parking area in the northern portion of the proposed Manchester Hybrid Station (Granite Street portion) at the southwest corner of Canal Street and Granite Street was occupied by a building labelled "writing room" on the 1915 Sanborn map. This building is depicted as a store on the 1950 Sanborn. A store is also present in this general location on the 1954 Sanborn Map. By the mid-1960s four structures appear present. By the mid-1970s only two of the four buildings are present. The 1971 through 1975 Sanborn maps depict a filling station and a commercial building at this location. By the mid-1980s, this lot is depicted as grassy and appears to be paved by the late 1980s. No additional information pertaining to the former filling station was obtained during the course of this assessment.

The Valley Street Station portion (southern portion of hybrid station) was formerly occupied by railroad tracks which appeared to have been removed in the late 1990s. The proposed Manchester Hybrid Station has remained in the same general configuration to present.

5.5.2 Surrounding Properties

5.5.2.1 Granite Street Portion

A tenement housing structure was located northwest beyond Granite Street from the late 1800s until the mid-1960s. This structure is no longer present by the mid-1970s. By the mid-1980s, a round structure is depicted surrounded by undeveloped (dirt) land. By the early 1990s, the area around the round structure is grassy with some trees. This parcel has remained in the same general configuration since at least 2006.

Further to the southwest toward the Merrimack River were the Manchester Mills Print Works from the late 1800s, textile mills from the early 1900s, Silver Brothers Company from the 1950s, Cott Bottling Company/Silver Brothers Company in the early 1970s, and by the mid to late 1970s, the buildings were demolished. This area has been used for parking since the late 1990s.

Areas to the east of the Granite Street portion and southwest of W. Auburn Street consisted of railroad tracks from the late 1800s through the early 1970s. A commercial building (Dept. Store 1971-1975 and Electronic Corp of America 1983-1989) was present from the early 1970s to present. Currently this building is occupied by a shopping center and includes a Market Basket grocery store and Title Boxing Club. To the northwest of W. Auburn Street was a commercial building constructed in 1987 and currently occupied by NBT Bank. Prior to construction, this parcel appeared to be used for parking from the mid-1960s and prior to that time, this area was occupied by railroad tracks.

To the west were store houses, a lumber shed and a building labeled “coal packer” associated with a printing operation from the late 1800s. By the 1950s, this area was occupied by a transformer yard and a building labeled “tire retreading and vulcanizing” which by 1954 became Bernard Tire. By the mid-1970s, the buildings were labeled commercial. According to Google, this building is currently occupied by NH Lottery and WMUR News (101 South Commercial Street). South Commercial Street, which is located immediately west of 101 South Commercial Street was a canal from the late 1800s until it was filled in the mid-1970s (Historic File Review, SHA, 2009). The road first appears on the 1977 aerial photograph. Commercial buildings further south first appear in the mid-1980s which are currently occupied by Auto City Collision Repair Center, Fortitude Dance, and Tri-State Enterprises game store.

5.5.2.2 Valley Street Portion

East of the Valley Street portion was a coal wood yard and Manchester Locomotive Works from the late 1800s. By the early 1900s, the former coal yard is replaced with the Manchester Iron and Metal Company (scrap metal). By 1950, the locomotive works is now occupied by Danvers Shoe Company and a building labeled used auto parts is present. The Danvers Shoe Company is labelled as box warehouse in 1954. By 1971, the used auto parts building is gone, the shoe company is labelled woodworking and gas, and four buildings are present including two restaurants and two filling stations. By 1983, the southern-most filling station is labelled as commercial and by 1985 the northern restaurant is labelled commercial. Based on Google maps, the former woodworking/gas building is occupied by a health club. The former restaurant buildings are occupied by Dunkin Donuts and St. Mary’s Bank, the former filling station is occupied by St. Mary’s bank, and a Prime gasoline station is in the location of the northern-most filling station.

The easterly Firestone Auto was constructed in 1966. Prior to that time, this area was occupied by railroad tracks.

To the south was the Manchester Gas Light Company/Peoples Gas Light Company from the late 1800s until at least the early 1980s. The gas holders were removed between 1965 and 1977. This area has been occupied by commercial buildings since that time. Based on Google photos, this property is occupied by Liberty Utilities.

To the west of the Valley Street portion was an engine house, fuel shed and railroad tracks from the late 1800s. By 1891 the fuel shed is labelled shed. Based on aerial photographs, portions of the engine house were present from the mid-1940s through the mid-1970s. Based on a report reviewed (Historical File Review, SHA, 2009), the former John Danais Company, a bulk distributor of dry-cleaning chemicals was present immediately west of the proposed station between 1964 until 1988.

Based on information reviewed on NHDES One Stop, the current Delta Dental Stadium was used as the city dump until the early 1900s accepting incinerator waste from nearby textile mills and the City of Manchester incinerator. Aerial photographs from the mid-1940s through the mid-1980s depict this area with trees and grasses but undeveloped. This area appears as reworked land in the early 1990s. By the late 1990s a rectangular field is present. The City of Manchester developed Singer Park between 2004 and 2005, a soccer stadium that was also used for carnivals and concerts (Wiki, 2021). The current stadium and Hilton Garden hotel are depicted on the 2006 aerial photograph and have remained in the same general configuration since that time.

5.6 Database Research

In accordance with the scope of work, a search of various governmental databases was conducted by EDR. The site-specific environmental database report was reviewed to evaluate if soil and or groundwater from on-site and/or off-site sources of concern has the potential to impact the project limits. Acronyms are defined in the EDR report which is included as Appendix D.

5.6.1 Manchester Hybrid Station

The project limits were not identified in the site-specific database report.

5.6.2 Off-Site Properties

Based on AECOM's review, 30 properties were identified within a 1,000-foot radius of the project limits listed on a contaminant-related database and are summarized below (Table 6). Seven of the 30 sites have not achieved regulatory closure.

Table 6
Summary of Contaminated Sites Within 1,000 Feet of
Proposed Manchester Hybrid Station
Manchester, New Hampshire

EDR ID	Name/Address	Databases	Dist/Direction	Comments
Orph	Rubenstein B&M Site, South Commercial St.	SHWS, LUST, UST	Abuts to west, downgradient	NHDES #198711001. The SHWS, LUST and LAST sites are closed. Due to proximity, details pertaining to this site is discussed below.
Orph	B&M Railroad/Danais, Canal Street	SHWS	Abuts to west, downgradient	NHDES # 199109022. The SHWS status is "unassigned". Due to proximity, details pertaining to this site are discussed below.
3	Autocity, 17 South Bedford Street	ALLSITES	Abuts to west, downgradient	NHDES #199902043. Phase I, 1998. No VOC or TPH impacts identified in groundwater. Case Closed. In AECOM's opinion, based on regulatory status, this site is not considered to pose an environmental concern for the proposed station.
Orph/4	Hilton Garden Inn (former Singer Park), 101 South Commercial St.	SHWS, VCP, Brownfields	150 feet west, downgradient	NHDES #200502056-#200502059. Due to proximity, additional details provided below. SHWS cases associated with 200502056 and 200502057 were closed September 2005. NHDES #200502058 was closed September 2010. NHDES #200502059 is listed as unassigned with no further information. VCP Cert of Completion issued 12/19/2008. In AECOM's opinion, based on downgradient location, and redevelopment of the land into a hotel, this site is not considered an environmental concern for the proposed station.
9	Elm Street Citgo, 276 Elm Street	LUST, UST, Spills	275 feet east, upgradient	NHDES #199103042. Product discharge line failure in January 1991. Petroleum impacts in soil and groundwater. Additional sampling conducted, no impacts in groundwater above standards. LUST/Spill closed in 1994. In AECOM's opinion, based on regulatory status, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.
11	Singer Park Landfill, 169 South Commercial St.	SWF/LF	150 feet west, downgradient	Unlined Landfill. Due to proximity, additional details provided below. In AECOM's opinion, due to downgradient location and redevelopment of the site to a park, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.
12	Singer Family Park, 169 South Commercial Street	SHWS	150 feet west, downgradient	NHDES #200210018. This site is listed as closed. Due to proximity, additional details provided below. In AECOM's opinion, due to downgradient location and redevelopment of the site to a park, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.

Table 6
Summary of Contaminated Sites Within 1,000 Feet of
Proposed Manchester Hybrid Station
Manchester, New Hampshire

EDR ID	Name/Address	Databases	Dist/Direc tion	Comments
16	Firestone, 300 Elm Street	LUST, UST, RCRA NonGen/NLR	Abuts to east, upgradient	NHDES #199410009. A 550-gallon used oil UST was removed. Approximately 38 yd ³ of impacted soil removed. Case closed 1994. In AECOM's opinion, based on regulatory status, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.
20	Langer Place, 55 South Commercial Street	LUST, UST, ALLSITES	290 feet southwest, downgradient	NHDES # 199403010. Tank closure report, initial site characterization complete, no sources remain onsite, concentrations in groundwater below AGQS. Case closed 1994. In AECOM's opinion, based on regulatory status and downgradient position, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.
23	33 South Commercial Street	UST, ALLSITES, AIRS, Asbestos	350 feet southwest, downgradient	NHDES #1998010178. ALLSITES associated with former fuel oil USTs removed 1996 and 2020. Case closed 1998. In AECOM's opinion, based on regulatory status, distance and downgradient position, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.
26	Next Level Performance Building, 31 South Commercial Street	SHWS	350 feet southwest, downgradient	NHDES #200910035. 2009 off-site investigation identified CVOCs in sub-slab soil gas samples. NHDES requested additional investigations. In AECOM's opinion, based on distance and downgradient position, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.
42	Hermisdorf Fixtures, 108 Franklin Street	UST, ALLSITES, RCRA NonGen/NLR, AIRS	250 feet east, upgradient	NHDES #199407080. Former machine shop/manufacturing. Former 20,000-gallon #6 fuel oil UST removed 1989 and replaced with 15,000-gallon #4 heating oil UST. Soil and groundwater impacts include gasoline and chlorinated VOCs and PAHs. As of most recent sampling benzene and naphthalene exceeded AGQS. ETHER portion of site considered closed. Transferred to OPUF. Additional investigations to be conducted, entered into GMP in 2021. In AECOM's opinion, based on regulatory status and upgradient position, this site <u>is</u> considered to pose an environmental concern for the proposed Manchester Hybrid Station.
50	Former Rockwell Automation, 460 Elm St.(Current Market Basket)	SHWS, Spills	Abuts to east, upgradient	NHDES# 200407074. PCE detected in groundwater samples above AGQS in 2010. Additional sampling in April 2011 identified CVOCs above AGQS in groundwater. The source of CVOCs was considered to be from an off-site upgradient property beyond Elm Street to the east. Case closed 2012. In AECOM's opinion, based on regulatory status, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.

Table 6
Summary of Contaminated Sites Within 1,000 Feet of
Proposed Manchester Hybrid Station
Manchester, New Hampshire

EDR ID	Name/Address	Databases	Dist/Direc tion	Comments
53	Former Jemma Building, 186 Granite Street	SHWS, UST, ALLSITES	350 feet southwest, downgradient	NHDES #199411017. Regulatory action complete. Case closed 2008. In AECOM's opinion, based on regulatory status and downgradient position, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.
55	Manchester Tobacco, 64 Granite Street	LUST	365 feet northeast, cross-gradient	NHDES # 198903058. 1,000-gallon fuel oil and 1,000-gallon used oil USTs removed 1998. CVOCs identified in groundwater. PCE above AGQS. Additional sampling identified CVOCs below standards. Case closed 1989. In AECOM's opinion, based on regulatory status and cross-gradient position, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.
72	Former Silver Brothers Trucking, 88 Commercial Street	LUST, UST	450 feet northwest, downgradient	NHDES # 199203043. Two 15,000-gallon USTs and one 1,000-gallon used oil UST removed 2001, 1990, and 1992. 41 tons of impacted soil removed. Case closed 1993. In AECOM's opinion, based on regulatory status and downgradient position, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.
73/74/75	Former Tidewater Oil, 516 Elm Street	LUST, UST, Hist Auto	480 feet east-northeast, upgradient (Granite Street Station)	NHDES # 198605513. Closure of two 3,000-gallon and one 1,000-gallon gasoline USTs in 2013. Case closed 2018. In AECOM's opinion, based on distance and regulatory status, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.
78	1848 Associates, 100 Commercial St.	SHWS, LUST, UST, ALLSITES, Spills	850 feet northwest, downgradient	NHDES # 200007008. 10,000-gallon #6 fuel oil UST closed in place 1999. Product identified in groundwater during 2004 and 2006 monitoring. As of 2008 no target compounds were identified in groundwater. Case closed 2010. In AECOM's opinion, based on distance, regulatory status and downgradient position, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.
30	Automotive Supply, 295 Elm St.	ALLSITES	50 feet east, upgradient	NHDES #201701003. Former gas station 1950s. Two 2,000-gallon USTs removed 2016, no impacts to soil or groundwater. Case closed 2017. In AECOM's opinion, based on regulatory status, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.
31	Merchants Motors Rent A Car, 257 Elm St.	LUST, UST, ALLSITES	75 feet northeast, cross-gradient	NHDES #199705017. Phase I/II completed in 2006. Former gas station/automotive repairs. CVOC impacts in soil and VOC impacts in groundwater identified. Two gasoline USTs removed in 1997, soil remediation completed. Case closed 2007. In AECOM's opinion, based on regulatory status, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.

Table 6
Summary of Contaminated Sites Within 1,000 Feet of
Proposed Manchester Hybrid Station
Manchester, New Hampshire

EDR ID	Name/Address	Databases	Dist/Direc tion	Comments
32	Former Keystone Battery, 235 Elm St.	ALLSITES	325 southeast, upgradient	NHDES # 199110032. Site Assessment submitted for review. Low impacts of petroleum hydrocarbon identified. Case closed 1991. In AECOM's opinion, based on regulatory status, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.
38	Goulet Supply, 341 Elm St.	LUST	480 feet east, upgradient	NHDES# 199207013. Removal 1,000-gal heating oil UST. Low level TPH in soil. Case closed 1995. In AECOM's opinion, based on regulatory status, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.
49	Goulet Supply, 409 Elm St.	LUST, UST	625 feet east, upgradient	NHDES #199506012. Closure of a 12,500-gallon #4 heating oil UST and removal of impacted soil completed in 1995. Case closed. During investigations in May 2021, the closed UST was found to be in the way of new foundation. In June 2021, NHDES approved additional funds for excavation of petroleum-impacted soil, and in September 2021, NHDES approved funds for additional impacted soil and groundwater removal. In AECOM's opinion, based on distance, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.
60	Import Connections, 512 Willow St.	SHWS, Inst. Control, ALLSITES	575 feet northeast, cross-gradient	NHDES# 200704033. Lead, PAHs, VOCs in soil above standards. PAHs and metals likely attributable to urban fill. Limited soil excavation conducted. An AUR was implemented to manage impacted soil that remained in place. Case closed 2013. In AECOM's opinion, based on regulatory status and cross-gradient position, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.
102	Frm Manchester Tire & Battery, 570 Elm St.	SHWS, LUST, ALLSITES	600 feet northeast, upgradient	NHDES # 199002002. Two former gasoline, one diesel, one fuel oil and one used oil USTs removed in 1991. Petroleum impacts in soil and groundwater. ISCO injections conducted and ongoing monitoring under GMP. Most recent 2021 groundwater data has 1,2,4-TMB slightly elevated. In AECOM's opinion, based on distance, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.
103	City Motor Sales, 31 Auburn St.	SHWS/UST	550 feet east-northeast, upgradient	NHDES #198611006. During 2019 Phase II, PCE and TCE identified in groundwater above standards. Abandoned diesel USTs identified. Additional investigations were recommended to evaluate the extent of impacts. NHDES reached out to responsible party in May 2021 and was informed they were unable to complete sampling due to Covid-related constraints. In AECOM's opinion, based on distance, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.

Table 6
Summary of Contaminated Sites Within 1,000 Feet of
Proposed Manchester Hybrid Station
Manchester, New Hampshire

EDR ID	Name/Address	Databases	Dist/Direc tion	Comments
107	Riverwalk (former Singer Park)	SHWS, Inst. Control, VCP, Brownfields	670 feet southwest, downgradient	NHDES # 200502060. 2005 Site Investigation conducted for redevelopment of 10.7-acre portion of Singer Park, south of the stadium. Northern portion used for stockpiling from former MGP waste and ash. AUR implemented September 2019. September 2, 2021, NHDES issued Notice of Violation associated with construction of a pool within the AUR area without engaging a qualified consulting firm to prepare a Soil Management Plan (SMP) or Health and Safety Plan (HASP). In AECOM's opinion, based on regulatory status and downgradient position, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.
111	Energy North (Frm MGP), 130 Elm St.	SHWS, AIRS	500 feet south, cross-gradient	NHDES # 200000301. Former MGP plant operated between 1852 and 1952. Current LNG Liberty Utilities. Additional details provided below. In AECOM's opinion, based on regulatory status and proximity, this site <u>is</u> considered to pose an environmental concern for the proposed Manchester Hybrid Station.
117	Prolerized New England Co., 399 Willow St.	SWL/LF, SWRCY, ALLSITES	980 feet southeast, cross-gradient	NHDES # 198606070. ALLSITES associated with UIC, closed September 2006. Ether Contaminated Site. Arsenic and benzene detected in groundwater above AGQS. Impacts believed to be from off-site upgradient source. NHDES requested investigation from upgradient party in 2009. Additional groundwater sampling conducted. NHDES issued closure in June 2017. In AECOM's opinion, based on regulatory status, distance and cross-gradient position, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.
134	Doubletree By Hilton, 700 Elm St.	Inst. Control, ALLSITES, AIRS	860 feet northeast, cross-gradient	NHDES #199408025. PAHs detected in soil above proposed standards in 1994. Risk assessment completed in 1994. Deed notice filed in 1995 indicating impacted soil is present. NHDES closed in February 2005. In AECOM's opinion, based on distance, regulatory status, and cross-gradient position, this site is not considered to pose an environmental concern for the proposed Manchester Hybrid Station.

Rubenstein B&M, South Commercial Street, Manchester, New Hampshire (NHDES # 198711011)

The Rubenstein B&M Site, located at the junction of South Commercial Street and Bedford Street is listed on the SHWS, LUST and Leaking Aboveground Storage Tank (LAST) databases. According to information obtained from NHDES OneStop, this site formerly operated as a B&M yard as a fueling station, switchyard, and boxcar storage yard. The property was sold to Sol Rubenstein in 1966 and used as a scrap metal yard with a portion leased to B&M for fueling with a 20,000-gallon diesel AST. Additionally, a portion of this property was leased to the John Danais Company, a regional distributor of dry cleaning products, and maintained an 8,000-gallon PCE AST. Based on an environmental site assessment (ESA) conducted in 1987, concentrations of PCE were identified in groundwater up to

22,000 parts-per-billion (ppb [or micrograms per liter {ug/l}]), TCE was detected up to 40 ppb, 1,1,1-trichloroethane up to 200 ppb with lesser concentrations of 1,2-dichloroethene and 1,1-dichloroethene. The source of CVOCs was considered likely attributable to the John Danais Company, Inc.

In 1990, an additional hydrologic study was conducted to further evaluate shallow groundwater conditions at the site, specifically to evaluate potential migration of contaminants from the upgradient PCE AST. An additional monitoring well was installed and groundwater samples collected for analysis. Concentrations of PCE were detected at the highest concentration (200,000 ppb) immediately downgradient of the PCE AST. An additional scope of work for the installation of three monitoring wells was approved by NHDES in 2001. In 1995, Mr. Rubenstein requested a no further action letter as impacts were coming from an off-site source.

In 1999, B&M issued a letter to NHDES indicating that the former petroleum UST and impacted soil were removed. The LUST case is listed as closed as of February 2001.

In 2001, a work scope was requested for additional monitoring wells. Four monitoring wells were installed and sampled. Petroleum constituents were identified in monitoring wells above risk standards. Concentrations of PCE were not identified in groundwater samples analyzed above the laboratory method detection limit (5 ppb). NHDES issued closure to this site in January 2002.

B&M Railroad/Danais Company, Off South End of Canal Street, Manchester, New Hampshire (NHDES #199109022).

B&M Railroad/Danais Company is listed as a SHWS. Limited information was available from OneStop under this file but identifies Pan AM Railways as the responsible party. A site investigation was requested in 1991. A site characterization was requested in 1995. A groundwater management permit (GMP) was issued in 1997 and 2002.

The former John Danais Company, Inc. delivered and sold PCE from 1964 to 1988, had documented PCE releases from the 8,000 gallon AST formerly located approximately 25 feet west of the railroad track (near the northeast corner of the parking area for the Hilton Garden Inn). The PCE AST was removed in 1988.

In 2007, Aries Engineering (Aries) submitted a Dynamic Work Scope for a Saturated Zone Rapid Assessment. According to the work scope, Aries excavated unsaturated zone soils containing PCE in accordance with the RAP in 1996. The excavated soil was placed in an on-site soil vapor extraction (SVE) treatment cell. Approximately half of the soil was treated to NHDES standards and segregated from the treatment pile for on-site reuse. The remainder of the PCE-containing soil excavated was reduced to concentrations low enough to be removed for landfill disposal as solid waste (non-hazardous daily cover) in April 2004. Site and vicinity redevelopment activities since April 2004 included the construction of a baseball stadium and hotel, with associated roadways and utilities. Environmental work by others during the redevelopment activities included the removal of additional PCE-containing soils for offsite disposal. The purpose of the assessment was to characterize and delineate site source area CVOC contamination, including DNAPL, concentrating on the saturated zone, using membrane interface probe (MIP), groundwater vertical profiling, and field laboratory methods.

This investigation was conducted in October 2007 on the Hilton Garden Inn parking lot, west of the project limits. Based on the results of this investigation, concentration of PCE in the vadose zone north of the former PCE area were close to double the NHDES S-1 standard. PCE vapors were present in the hard packed parking lot base material. Higher concentrations of PCE were detected in the upper portion of the saturated zone with concentrations decreasing with depth. DNAPL composed of 90 percent PCE and 10 percent motor oil was observed at a microwell approximately 220 feet from the former AST. The source of observed DNAPL at microwell GP-4 was likely unrelated to the site PCE AST facility release site. The waste PCE DNAPL was considered likely associated with the past industrial practices in a former nearby railroad maintenance facility and/or other upstream culvert/sewer users.

In 2009, NHDES requested Pan AM to perform a site investigation and remedial work. In June 2009, Pan AM responded to NHDES indicating that they were working with their consultant to prepare a scope of work to be submitted to NHDES for approval. A scope of work, dated July 2009, was to provide further interpretation of the results of a "Saturated Zone Source Characterization Activities Report" prepared by Aries in 2008 and to complete the delineation of PCE impacted soil and groundwater. On January 13, 2011, NHDES verbally requested a revised scope of work that took into consideration the supplemental site investigation work performed in 2010 (NHDES

#200502058-Hilton Garden Inn). The 2008 Certificate of Completion for NHDES #200502058 (Hilton Garden Inn) indicated that groundwater monitoring should continue in accordance with the groundwater management permit for NHDES# 199109022-M-002. That permit expired June 26, 2007 and has not been renewed. No additional information was provided in the online files.

Based on AECOM's review, the former PCE AST was located approximately 25 feet west of the existing railroad tracks. In AECOM's opinion, based on proximity, there is a potential for residual PCE-impacted soil and/or groundwater to be present within the project limits in the vicinity of the former PCE AST. In AECOM's opinion, based on proximity and regulatory status, this site is considered an environmental concern for the proposed Manchester Hybrid Station.

Singer Family Park, 169 South Commercial Street, Manchester (NHDES # 200210018)

The site was redeveloped as baseball stadium and Hilton Garden Inn hotel in 2005, with associated roadways and utilities. Environmental work during the redevelopment activities included the removal of PCE-containing soils. The site groundwater quality monitoring program indicated generally declining PCE concentrations; however, concentrations in groundwater samples from a groundwater monitoring well indicate the potential presence of PCE DNAPL in the site saturated zone.

In 2004, Gemini Geotechnical Associates (Gemini) prepared a report summarizing the results of installation of mini piles on the southeast side of the Manchester Stadium. The investigation was conducted to determine the need to enter the NHDES Brownfields program. The report indicates that in 780 cubic yards of PCE impacted soil was removed in 1996, approximately 790 tons of PCE-impacted soil was removed in 2004 and an additional 159 tons of impacted soil were removed in 2004 all in the vicinity of the former PCE AST associated with the former John Danais site. Additional roadway work in August 2004 resulted in the removal of an additional 350 to 400 cubic yards of soil. The geoprobe investigation was conducted immediately downgradient of the former Danais release. Significant PCE impacted soil was discovered at a depth of 5.0 to 5.5 feet below grade. Gemini recommended their client to enter into the Brownfields program and to conduct soil removal necessary as part of the Covenant Not to Sue for the property.

In a May 26, 2005 correspondence, NHDES requested a site saturated zone source characterization and delineation program using a dynamic work plan and rapid assessment technologies (membrane interface probes) which was subsequently completed by Aries as indicated above. NHDES closed this site in 2005. In AECOM's opinion, based on regulatory status and downgradient location, this site is not considered an environmental concern for the proposed Manchester Hybrid Station.

Former Singer Park, Baseball Stadium, South Commercial Street, Manchester (NHDES #200502056).

A notice of Activity and Use Restriction (AUR) was placed on the property in June 2005 (Map 909, Lot 7 Stadium). The AUR indicates asbestos had been identified in soil in the northwestern portion of the property and incidental asbestos may be encountered within the landfill material placed on the property; ash containing metal concentrations above Method 1 risk standards had been detected in the fill material; petroleum hydrocarbons and coal tar have been released to the subsurface; VOCs including PCE, TCE and DCE were released on adjacent properties and have been detected in groundwater northeastern portion of the stadium property with PCE above AGQS; and, areas where contaminants in soil exceed RCMP guidelines have been capped with pavement or a minimum of two feet of clean fill. The AUR restricts disturbance of pavement or excavate subsurface soil, and excavation of soil is prohibited without the development of a NHDES-approved SMP and HASP. NHDES closed this site in September 2005. In AECOM's opinion, based on regulatory status and downgradient location, this site is not considered an environmental concern for the proposed Manchester Hybrid Station.

Former Singer Park, Baseball Stadium, South Commercial Street, Manchester (NHDES #200502057).

A notice of AUR was placed on the property in June 2005 (Map 909, Road Parcel A, B, C). In addition to the materials identified above under NHDES #200502056, the AUR for Parcel C further indicates demolition debris from former Arms Textile Mill, where a historical outbreak of anthrax occurred, has been disposed and covered with clean fill and pavement. In addition to development of an SMP, a HASP that addresses mitigation of potential exposure to anthrax is required. NHDES closed this site in September 2005. In AECOM's opinion, based on regulatory status

and downgradient location, this site is not considered an environmental concern for the proposed Manchester Hybrid Station.

Hilton Garden Inn (former Singer Park), 101 South Commercial Street, Manchester (NHDES #200502058)

The site is listed on the SHWS, VCP, and Brownfield databases. A supplemental site investigation was prepared in 2010 to obtain a better understanding of the source and extent of PCE and DNAPL in a monitoring well (GP-4). NHDES indicated that revised conceptual site model prepared by New England Envirostrategies supports their conclusion that the source of PCE contamination at the Hilton Garden Inn property is located upgradient of the site and as a result, a Letter of No Further Action for the site was issued September 8, 2010. In AECOM's opinion, based on regulatory status and downgradient location, this site is not considered an environmental concern for the proposed Manchester Hybrid Station.

Energy North, Former MGP, 130 Elm Street, Manchester, New Hampshire

Based on information reviewed online with the NHDES, this former manufactured gas plant (MGP) facility had two relief holders, two distribution holders, one tar tank, two tar wells, a tar separator, and three oil gas oil tanks. Gas holders were removed in 1974. Two of the former gas holders are now occupied by LNG tanks. A stone box culvert crosses under the B&M railroad (south of the project limits) into a ravine and subsequently the Merrimack River. Dye testing conducted in 2001 showed no connection between the site and the stormwater ravine. DNAPL between one and 10 feet was present downgradient (west) of former holders. PCE and TCE impacts were identified in groundwater which were determined not to be associated with the former MFG operations. Remediation of a former Tar Well #1 was completed in 2000. Phase II investigations were conducted in 2002-2004 and expanded downgradient (west) at the former Singer Park property and Merrimack River. Based on a site plan provided in a 2005 supplement subsurface investigation, access to the B&M land was not permitted for investigation. Surface soils at the site were impacted with metals (arsenic and lead), benzo(a)pyrene, and benzene above NH S-3 soil standards. Oil-like material and tar-like material had been released to site soils and sediment from both historic structures and releases from site sewer lines.

According to 2010 Remedial Action Plan (RAP) prepared by GZA, the recommended remedial alternatives for the site included a combination of: source removal for selected site subsurface structures where DNAPL removal was anticipated to provide a reduction in the potential for the further release of DNAPL to the subsurface; NAPL recovery from the subsurface to reduce contaminant mass within the subsurface; construction of a barrier to DNAPL movement proximate to the Merrimack River to eliminate the potential for DNAPL movement to the substrate of the Merrimack River; and long term use of administrative controls to address potential human exposure to residual soil and groundwater contamination.

The 2018 RAP prepared by GZA indicates that LNAPL, attributed to releases from a tank and/or piping, is present on the groundwater surface at a depth of approximately 4 feet to 8 feet bgs. Historical data suggest that semi-volatile VOCs (SVOCs), arsenic, and lead were generally present in surface and shallow subsurface soils throughout much of the site above NHDES Risk Characterization Management Policy (RCMP) Method 1 S-3 standards. Historically, total and free cyanide have been detected in groundwater samples collected from monitoring wells located on-site and off-site and downgradient of the site in wells located along the Merrimack River. GZA observed material potentially impacted by cyanide and potential purifier waste between approximately 4 to 7 feet below ground surface in a test pit approximately 750 south of the proposed station. Cyanide concentrations were below NHDES criteria. In addition, oil-impacted material was encountered at this location between 10 and 13 feet below ground surface. Removal and off-site disposal of material contained in Tar Wells #2 and 3, located over 600 feet south of the proposed station, was completed as part of this investigation.

Based on the 2020 Annual Report, concentrations of PCE, TCE, benzene, toluene, ethylbenzene, 1,2,4-trimethylbenzene, naphthalene, and styrene are present in groundwater above AGQS. DNAPL was present in seven monitoring wells located along the downgradient (western) property boundary and adjacent to the Merrimack River. LNAPL was identified in six wells associated with the former Steel Oil Gas Tank #1, located on the eastern (Elm Street) side of the site. The Groundwater Management Zone (GMZ) for this site extends as far west as the Merrimack River beyond the Delta Dental Stadium and as far east as the eastern property boundary along Elm Street. A portion of the proposed station as well as planned access road from Valley Street are located within the

GMZ of this site. In AECOM's opinion, there is a potential for impacted soil and groundwater associated with this site be located within the southern portion of the project limits and is considered an environmental concern.

5.7 Landfills

AECOM researched landfill facilities located within 4,000 feet of the project limits. According to the NHDES OneStop and EDR databases, three landfills are located within 4,000-feet of the project limits and discussed below (Table 7). Additionally, according to the EPA's "Methane Outreach Program" no landfills were identified within 4000 feet of the project limits. Based on regulatory status, distance and/or topography, none of landfills are considered environmental concerns for the proposed Manchester Hybrid Station.

**Table 7
Summary of Landfills Located Within 4,000 Feet of
Proposed Manchester Hybrid Station**

Address	Type	Details	Facility Listing	Distance/Direction
Prolerized New England Company, 399 Willow Street	Metals, electronics, lead batteries, scrap metal, non-ferrous metals	Drive through building, drop off material	Facility ID 000068, SWF/LF – Not operating. SWRCY UIC-NHDES #19606070 Closed	980 feet southeast, cross-gradient
Polarized New England Company, 200 Allard Drive	Collection, Storage and Transfer – bulk waste, white goods, non-ferrous and ferrous metals, scrap metal, lead acid batteries	Started 1997. All metals managed outdoors in stockpiles. Accepts drained whole body cars. Paved surface. Stormwater runoff to UST	SWF/LF – Permit # DES-SW-LP-97-001, Facility ID: 000007, Operating, SWRCY, ALLSITES, Spills NHDES # 201312015 Closed	2,000 feet northwest, downgradient (Granite Street Station)
Singer Park Landfill	Unlined Landfill	Ash/C&D. Ten to 35 foot ash layer consisting of loose fine material with cinders, brick and glass is present across the site. Chrysotile asbestos was identified in the northwest portion of the site. Additionally, the Arms Textile Mill demolition debris was also located in northwestern portion of site. The mill was condemned and demolished due to anthrax contamination; however, building was reportedly decontaminated prior to demolition. CVOC plume from upgradient off-site John Danais/B&M site present in groundwater. Petroleum impacts present and likely attributable to former upgradient MGP plant.	SWF/LF NHDES 20050256 (AUR filed for Stadium and Parcels A, B & C, 2005)	150 feet west, downgradient.

6. Proposed Layover Facility, Manchester, New Hampshire

6.1 Site Location

The proposed Layover Facility is located east of existing railroad tracks and extends from Hancock Street north approximately 1,700 feet in Manchester, Hillsboro County, New Hampshire. The proposed Layover Facility is situated approximately 1,160 feet northeast of the intersection of Interstate 293 and Queen City Avenue.

According to the Manchester, New Hampshire Assessor's Office and information provided, the proposed layover facility is an approximately 4.5-acre portion of Map 930 Lot 9 that consists of 18.45 acres of land. Refer to **Figure 6-1 – Site Location Map** for the general location of the proposed station and to **Figure 6-2 – Site Plan** for details of the proposed station.

6.2 Site Ownership

According to the Manchester, New Hampshire Assessor's Records, the overall parcel for the proposed layover yard is owned by the Boston & Maine Corp.

6.3 Site Visit

Ms. Kristen Galeckas and Ms. Cheryl Cormier with AECOM's Chelmsford, Massachusetts office visited the project limits on December 1, 2021. Ms. Galeckas and Ms. Cormier were escorted to the proposed station location for the site visit by Pan AM representative John LeBlanc. No site-related limiting conditions were encountered during this assessment.

The site visit methodology consisted of walking the proposed station and improvements including parking areas and the portions of the surrounding area. The following sections summarize the results of the site visit. The purpose of the site visit was to evaluate the potential for any physical evidence of contamination or potential contamination sources.

During the site visit, no visual evidence of potable water wells, monitoring wells, dry wells, clarifiers, septic tanks, or leach fields was identified within the project limits. Several areas of piles of railroad ties and/or solid waste debris were observed primarily along the borders and somewhat throughout the proposed Layover Facility. Outside of normal discoloration of soils due to railroad use and a few minor oil stains on the rocks adjacent to the tracks (~1'x1' area), no visual evidence of discolored soil, water, or unusual vegetative conditions or odors was identified during the site visit.

6.4 Surrounding Properties

Properties to the east include (from northeast to southeast) Liberty Utilities, Manchester Transit Authority, vacant land and The Elliot at Rivers Edge (outpatient medical facility). Land to the west beyond the railroad tracks include (from southwest to northwest) vacant wooded land, Merrimack River Park (residential condominiums), Riverwalk Way and Residence at Riverwalk. The Merrimack River is located between approximately 275 and 600 feet west of the proposed Layover Facility.

6.5 Site and Area History

Historical information for the project limits and surrounding properties is based on AECOM's review and analysis of the following historical sources:

Aerial photographs dated 1947, 1952, 1965, 1977, 1985, 1992, 1998, 2006, 2009, 2012, and 2016;

Google Earth photos dated 2003, 2005, 2008, 2011, 2014, 2018, and 2019;

Topographic maps dated 1905, 1941, 1943, 1944, 1953, 1957, 1968, 1974, 1985, and 2012;

Sanborn maps dated 1915, 1950, 1954, 1971, 1973, 1975, 1980, 1983, 19985, and 1989;

Manchester, New Hampshire Assessor online GIS database; and,

Information obtained from previous reports on New Hampshire Department of Environmental Services (NHDES) OneStop database.

Sanborn map coverage was only available for the southern portion of the project area. No Sanborn coverage was provided for 1980.

6.5.1 Proposed Overlay Facility

Historical research indicates that the railroad tracks have been present since at least the early 1900s and the area adjacent to the tracks to the east has remained undeveloped wooded land with the exception of east of the northern portion of the tracks which appeared to be improved with a roadway and the southern portion of the project area north of Hancock Street. Based on the 1915 sanborn map, the southeastern portion of the project area east of the railroad tracks and north of Hancock Street was occupied by the True Jones Brewing Company that included the brewery buildings, a well, and an icehouse. Additionally, a 15-foot high railroad aboveground water tank was located north of the brewing company. By 1950, the brewing company is replaced by the Granite State Packaging Company/Slaughterhouse. The well is labelled as "covered well". The icehouse is labelled "cattle shed". The water AST remains until the mid-1950s. This area remains the same until 2009 at which time the buildings have been demolished and the area appears as vacant land. The project limits have remained in the same general configuration since that time.

6.5.2 Surrounding Properties

The area to the northeast of the project area was developed with the Manchester Gas Works (with three gas holders) from at least 1852 through the mid-1970s. According to information from previous reports, the plant operated as a coal manufacturing plant until 1952 when natural gas became available. According to the Manchester Assessors' office, the current building was constructed in 1964. Based on historical reports reviewed, the gas holders had all been removed by 1974. This area has remained in the same general configuration since that time.

To the southeast of the project area south of Hancock Street was undeveloped land from at least the late 1940s until the mid-1970s when a commercial building was present. As indicated below, in the late 1990s, the building was connected to the westerly adjacent building with what appears to be an overhead walkway over the railroad tracks. By 2009, the building was demolished and redeveloped with the current Elliot outpatient building in 2010.

From at least 1915 through 1960, southwest of the project area beyond the railroad tracks was the Manchester Rendering Company with a portion of the building labelled "oil storage". By 1965, this building has been demolished and developed with a parking lot by 1977. The parking lot was developed with a building by the late 1990s which was connected to the easterly adjacent building as indicated above. By 2011 the building was demolished and the area has remained as undeveloped land with some grass and trees.

To the east and west of the project area was undeveloped wooded land with a railroad bridge over the Merrimack River from at least the mid-1940s through the mid-1970s when the Manchester Transit Authority building was constructed to the east. Construction of the residential condominiums to the west began in 2006 and were completed by 2016. The area west of the tracks north of the railroad bridge was formerly owned by the Amoskeag Manufacturing Company. Surrounding properties have remained in their same general configuration since this time.

6.6 Database Search

In accordance with the scope of work, a search of various governmental databases was conducted by EDR. The site-specific environmental database report was reviewed to evaluate if soil and or groundwater from on-site and/or off-site sources of concern has the potential to impact the project limits. Acronyms are defined in the EDR which is included as Appendix E.

6.6.1 Proposed Layover Facility

The proposed project limits were not identified in the site-specific database report.

6.6.2 Off-site Properties

Based on AECOM's review, 20 properties were identified within a 1,000-foot radius of the project limits listed on a contaminant-related database and are summarized below (Table 8). Eight of the 20 sites have not achieved regulatory closure.

**Table 8
Summary of Contaminated Sites Within 1,000 Feet of
Proposed Layover Facility
Manchester, New Hampshire**

EDR ID	Name/Address	Database	Dist/Direction	Comments
5	Riverwalk Place (FRM Singer Park), Riverwalk Way	SHWS, Inst Control, VPC, Brownfields	110 feet northwest, downgradient	<p>NHDES # 200502060: Subsurface investigations conducted in 2004 to evaluate extent of TCE contamination associated with the former John Danais site (#199109022). TCE above NH S-1 standards was identified in five of eleven borings analyzed. An AUR was submitted in 2019 for approximately 4.3 acres (currently occupied by the three condo units Building M-1 through M-3). The AUR indicates that the area had been extensively filled post-1941. Fill depths range to 34 feet and consisted of municipal incinerator ash fill and construction/demolition (C&D) debris placed from the late 1800s through the early 1900s. Ash containing metals and PAHs associated with the former deposition of City of Manchester landfilling practices were detected in the surficial soil above the SRSs. MGP byproducts were identified in soil. VOCs had been released at several upgradient sites and have been detected on the property above AGQS.</p> <p>The VPC application was received in 2006. The notes in the EDR report indicate "property transferred to successor owner". The Brownfields and SHWS are active. In AECOM's opinion, based on downgradient location, and redevelopment of the land into residential condominiums, this site is not considered an environmental concern for the proposed Layover Facility.</p>
11	Former Queen City Sunoco, 229 Queen City Avenue Helies Serv. Stat Bourassa Auto Rep	LUST, UST Hist Auto RCRA NonGen/NLR	550 feet south, cross-gradient	<p>NHDES #199008047. Site operated as gasoline station since the 1960s. Based on a 2017 Supplemental Site Investigation (SSI) report by Ransom, soil and groundwater are impacted by petroleum releases likely associated with historic UST systems. Groundwater flow was evaluated to be in a west-southwesterly direction. Based on 2021 sampling, concentrations of BTEX, 1,2,4-TMB, 1,3,5-TMB, naphthalene, and n-propylbenzene are present in groundwater above AGQS. Ongoing groundwater sampling is conducted under GMP. Based on distance and topographic position, this site is not considered an environmental concern for the proposed Layover Facility.</p>

Table 8
Summary of Contaminated Sites Within 1,000 Feet of
Proposed Layover Facility
Manchester, New Hampshire

EDR ID	Name/Address	Database	Dist/Direction	Comments
14	Liberty Utilities (Energy North Natural Gas), 130 Elm Street	SHWS, AIRS, RCRA, Manifest	130 feet east upgradient	NHDES #200003011. Former MGP plant operated between 1852 and 1952. Current LNG Liberty Utilities. Details provided Section 5.6.2 . Based on AECOM's review of previous reports and current regulatory status, this site <u>is</u> considered an environmental concern for the proposed Layover Facility.
23	Lighttower Fiber Networks, LLC, 1 Sundial Ave,	SHWS, AST, AIRS	655 feet south, cross-gradient	NHDES #198903057. Property formerly occupied by Foster Grant Company in the 1950s. Concentrations of 1,1,1-trichloroethane were detected above standards during a 1993 Phase II investigation. In 1996, several PAHs identified in site soils which were believed to be associated with a former coal-fired heating system. All PAHs were below Method 1 S-3 standards except benzo(a)pyrene. A 1998 report prepared by Geolnsight indicated that an AUR was proposed to manage impacted soil in place. However, NHDES responded indicating that the AUR was not required because PAHs associated with coal ash were exempt. A Certificate of No Further Action was issued on June 9, 1999. In AECOM's opinion, based on distance, topographic position and regulator status, this site is not considered a concern for the proposed Layover Facility.
29	Accord Auto Sales, 151 Elm Street	ALLSITES	830 feet east, upgradient	NHDES #200704050. Unsolicited site assessment reviewed, case closed. In AECOM's opinion, based on distance, topographic position and regulator status, this site is not considered a concern for the proposed Layover Facility.
32	Accolade Environmental Contracting Corp, 159 Elm Street	LAST, Spills, asbestos	667 feet east-northeast, cross- to upgradient	NHDES # 199105030. Subsurface investigation conducted in 1991 to address a release of fuel oil associated with vandalism. LNAPL had been identified in several monitoring wells in 1999. The LNAPL was believed to be from an off-site source. In 2000, five 20,000-gallon fuel oil ASTs were removed from the site. Soil was excavated to approximately 12 feet below grade. A RAP prepared in 2000 recommended natural attenuation as the remedial action. Groundwater was monitored and in 2018, NHDES issued an intent to close letter; however, the Certificate of No Further Action has not been issued as of yet. In AECOM's opinion, based on distance, topographic position and regulator status, this site is not considered a concern for the proposed Layover Facility.
34	Former Agway, 209 Queen City Ave	LUST, UST	685 feet southeast, cross-gradient	NHDES #198406017: Three USTs removed in 1985. Impacted groundwater identified in 1998. Groundwater monitoring was conducted up through 2010. A certificate of no further action was issued on March 28, 2011. In AECOM's opinion, based on distance, topographic position and regulator

Table 8
Summary of Contaminated Sites Within 1,000 Feet of
Proposed Layover Facility
Manchester, New Hampshire

EDR ID	Name/Address	Database	Dist/Direction	Comments
				status, this site is not considered a concern for the proposed Layover Facility.
37	Manchester Transit, 110 Elm Street	Brownfields, SHWS, LUST, ALLSITES, Spills, PFAS	Abuts to east, upgradient	<p>NHDES #199712026. Building includes a maintenance bay with ground hydraulic lifts, as well as separate bus wash building and fueling station southwest and southeast of the main building. Waste oil, diesel, gasoline and motor oil USTs removed and replaced with two 20,000-gallon gasoline and diesel fuel USTs in 1997. During a subsurface investigation in 2002 to assess soil in the vicinity of a former waste oil UST and maintenance garage, TPH was identified in soil at 60,400 mg/kg, which was above the SRS of 10,000 mg/kg. Petroleum contamination in soil and groundwater was assumed to be associated with a release near the UST and pump island. BTEX and MTBE in groundwater attenuated by 2000 and 2011, respectively. GMP issued in 2001. CVOC impacts in site groundwater above GW-1 and GW-2 identified near the removed USTs and thought to be associated with either the former waste oil UST or from off-site upgradient property. The LUST listing was closed 2005.</p> <p>Groundwater sampling continued under GMP. In 2015, due to increasing trends of PCE, NHDES requested a plan to evaluate the source of PCE. In May 2017, NHDES requested initial PFAS screening. In 2019, a release of hydraulic oil occurred in the garage. Based on files reviewed, additional subsurface investigations in 2020 identified TPH in once soil sample above the SRS. No PAHs or TPH were detected above AGQS in groundwater samples. CVOCs were detected in groundwater above AGQS. Initial PFAS sampling completed in 2020. PFOA was detected above the AGQS, with the highest concentrations in the upgradient well. A review of NHDES files was conducted in order to further evaluate the potential source of CVOCs in groundwater. Based on data reviewed, the extent of CVOCs in groundwater at the off-site upgradient former Electropac site was not well defined and could represent a regional groundwater quality issue. An additional SSI was proposed for 2021. In AECOM's opinion, based on current status and proximity, this site <u>is</u> considered an environmental concern to the proposed Layover Facility.</p>
41	Elliot at Rivers Edge, 185 Queen City	SHWS, LUST, VCP, Brownfields, ALLSITES	Abuts to southeast, cross-gradient	<p>NHDES #199904017. Brownfields application in Jan 2008. Phase II report indicates property has been used for meat packaging and former gasoline station. Gasoline impacts to groundwater identified. LNAPL and separate phase product had been identified in monitoring wells located near former USTs. Additionally, PCE and TCE had been detected in</p>

Table 8
Summary of Contaminated Sites Within 1,000 Feet of
Proposed Layover Facility
Manchester, New Hampshire

EDR ID	Name/Address	Database	Dist/Direction	Comments
				groundwater in the vicinity of the former UST above standards. RAP prepared in 2008. The site was to be redeveloped with residential, retail and urgent care buildings. The RAP detailed soil impacted would be disposed/treated off-site, if dewatering was needed, groundwater would be discharged to the Manchester municipal wastewater treatment facility, an application for GMP would be prepared, and if impacted soil remained in place an AUR would be prepared. A certificate of completion was issued by NHDES on 12/9/2009 and closed on 9/19/2011. In AECOM's opinion, based on topographic position and regulatory status, this site is not considered an environmental concern for the proposed Layover Facility.
46	Thibeault Corp., 52-62 Elm Street	LUST	900 feet east, upgradient	NHDES #199608001. Release of #6 fuel oil identified during tank removal in 1995. Concentrations of PAHs in soil and groundwater were identified above standards during a Phase II investigation in 2000. Additional rounds of groundwater sampling did not detected PAHs above standards. A Corrective Action Plan was provided to NHDES in 2002 that proposed soil excavation to address exceedances in soil. Approximately 760 cubic yards of soil was excavated in 2003. All soil and groundwater standards had been met and regulatory closure was issued on 1/28/2004. Based on distance and regulatory closure, this site is not considered an environmental concern for the proposed Layover Facility.
50/51	Singer Family Park, Singer Landfill	SWF/LF, SHWS	250 north, cross-gradient	NHDES # 200210018. Details pertaining to this disposal site are discussed previously in Section 5.6.2 . SHWS closed 2005. In AECOM's opinion, based on regulatory status, this site is not considered an environmental concern for the proposed Layover Facility.
	Swanson Die Company, 161 Queen City Ave	ALLSITES	800 feet southeast, cross-gradient	NHDES # 199103056. Tank evaluation for 2,000-gallon heating oil tank closed. No evidence of a release that would impact surface water or groundwater had occurred. Case closed April 2018. In AECOM's opinion, based on regulatory status, distance and topographic position, this site is not considered an environmental concern for the proposed Layover Facility.
62	Pauls Executive Car, 80 Elm Street	ALLSITES	970 feet east, upgradient	NHDES # 199904019. Unsolicited site assessment submitted for review in 1998. MTBE was identified in groundwater above AGQS and believed to be from an off-site source. Case closed August 2001. In AECOM's opinion, based on regulatory status and distance this site is not considered an environmental concern for the proposed Layover Facility.

Table 8
Summary of Contaminated Sites Within 1,000 Feet of
Proposed Layover Facility
Manchester, New Hampshire

EDR ID	Name/Address	Database	Dist/Direction	Comments
66/67	Easter Seals/Queen City Inn, 140 Queen City Ave	Brownfields, ALLSITES	800 feet southeast, cross-gradient	NHDES # 201202001. Phase I and Phase II completed in accordance with Manchester Brownfields program in 2012. No constituents detected in groundwater above AGQS. Case closed June 2012. In AECOM's opinion, based on regulatory status, distance and topographic position, this site is not considered an environmental concern for the proposed Layover Facility
71	7-Eleven, 117 Queen City Ave	SHWS, LUST	920 feet southwest, cross-gradient	NHDES #199812072. Site has operated as a gasoline filling station since the 1950s and was listed for a petroleum release during UST removal in 1998. Groundwater monitoring under GMP. Based on the most recent 2020 groundwater sample data, no petroleum constituents were present in groundwater; however, a sheen was observed and NHDES recommended continued monitoring under GMP. Based on lack of impacts to groundwater above AGQS and distance from the proposed Layover Facility, this site is not considered an environmental concern.
84	Former Keystone Battery, 235 Elm Street	ALLSITES	970 feet east, upgradient	NHDES #199110032. Unsolicited site assessment submitted for review. Low concentrations of TPH identified in groundwater. Case closed October 1991. In AECOM's opinion, based on regulatory status and distance this site is not considered an environmental concern for the proposed Layover Facility
98	Merchants Motor, 157 Elm Street	LUST, ALLSITES	970 feet east, upgradient	NHDES #199705017. Phase I/II ESA conducted in 2006. Site occupied by gasoline station and/or auto repair 1930s through 1960. PCE detected in shallow soil adjacent to shed, VOCs and metals detected in groundwater. Two LUSTs were removed in 1997 from the site under 199705015. Additional groundwater sampling conducted, below standards, case closed August 2007. In AECOM's opinion, based on regulatory status and distance this site is not considered an environmental concern for the proposed Layover Facility.
105	Former West Site Pump Station, 310 Second Ave	LUST, Brownfields, ALLSITES	980 feet northwest, downgradient	NHDES #198611002. Petroleum, metals, and PAHs detected in soil in 2007. Groundwater sampling requested. Based on most recent groundwater sampling data in July 2021, petroleum constituents were below AGQS. In AECOM's opinion, based on low concentration of impacts, distance (located beyond Merrimack River) this site is not considered a concern for the proposed Layover Facility.
108	Hilton Garden Inn, 101 South Commercial Street	SHWS, VCP, Brownfields.	900 feet north-northeast, cross-gradient	NHDES #200502058. Case closed 2010. Additional details provided in Section 5.6.2 . Based on distance and cross-gradient location, this site is not considered an environmental concern for the proposed Layover Facility.

Table 8
Summary of Contaminated Sites Within 1,000 Feet of
Proposed Layover Facility
Manchester, New Hampshire

EDR ID	Name/Address	Database	Dist/Direction	Comments
120	Bass Island East, 344 Second Street	ALLSITES, Brownfields	950 feet northwest, downgradient	NHDES #200608074. Brownfields assistance application filed in 2006. An ESA in 2005 identified a 275-gallon AST, and recommended removal of AST as well as removal of hydraulic lift and fluorescent lighting, investigation of floor drains near the forge, and additional test pitting adjacent to the facility. Based on a Phase I/II investigation in 2006, several VOCs below S-1 standards, and PAHs and metals above S-1 standards were identified in soil samples. Low levels of arsenic were identified in groundwater. According to the report, potential primary source of the constituents detected in the soil are attributable to the former use of the subject property as a blacksmith and welding shop, and fill material consisting of coal ash and coal slag. Based on low levels of impacts identified and distance beyond the Merrimack River, this site is not considered to be an environmental concern for the proposed Layover Facility.

6.7 Landfills

AECOM researched landfill facilities located within 4,000 feet of the proposed Layover Facility. According to the NHDES OneStop and EDR databases, one landfill is located within 4,000-feet of the proposed station and discussed below (Table 9). Additionally, there are two solid waste recycling facilities within 4,000 feet and are included in the table below. According to the EPA's "Methane Outreach Program" no landfills were identified within 4000 feet of the project limits. Based on distance, position, and/or regulatory status, none of the sites are considered an environmental concern for the proposed Layover Facility.

Table 9
Summary of Landfills Within 4,000 Feet of
Proposed Layover Facility
Manchester, New Hampshire

Address	Type	Details	Facility Listing	Distance/Direction
Singer Park Landfill, 169 South Commercial Street	Unlined Landfill	Ash/C&D. Ten to 35 foot ash layer consisting of loose fine material with cinders, brick and glass is present across the site. Chrysotile asbestos was identified in the northwest portion of the site. Additionally, the Arms Textile Mill demolition debris was also located in northwestern portion of site. The mill was condemned and demolished due to anthrax contamination; however, building was reportedly decontaminated prior to demolition. CVOC plume from upgradient off-site John Danais/B&M site present in groundwater. Petroleum impacts present and likely attributable to former upgradient MGP plant.	Facility ID 0002907, NHDES # 200502056 (AUR filed June 2005)	250 north, cross-gradient
Advanced Recycling, 399 Willow	Collection, Storage and Transfer - Scrap Metal, Electronics, Non-ferrous and ferrous metals, lead acid batteries	Started 1993. Output 150 tons per week. Vehicles drive through building, material placed in dumpsters.	Facility ID 000068, SWF/LF – Not operating. SWRCY UIC-NHDES #19606070 Closed	1,050 feet east, upgradient
Prolerized New England Company, 200 Allard Street	Collection, Storage and Transfer – bulk waste, white goods, non-ferrous and ferrous metals, scrap metal, lead acid batteries	Started 1997. All metals managed outdoors in stockpiles. Accepts drained whole body cars. Paved surface. 7. PFAS Evaluation

AECOM performed a search of the NHDES OneStop and PFAS Sampling Map to identify any sites with records of PFAS sampling and any NHDES requests to sample for any media type (soil, groundwater, surface water) within 1,000 feet of the project limits.

Additionally, AECOM searched remedial sites where Class B Foam/AFFF Fire Fighting Use Area. No sites were identified within Nashua, Manchester, or Bedford.

AECOM reviewed the list of sites being investigated for the presence of PFAS by NHDES (https://www4.des.state.nh.us/nh-pfas-investigation/?page_id=75) on July 13, 2021. None of the 23 sites listed are located within 1,000 feet of the proposed stations or Layover Facility.

AECOM reviewed online files for the contaminated sites listed in Tables 1, 3, 5, 6, and 8, landfill listings, and the PFAS data mapper to identify PFAS sites within a 1,000-foot radius of the proposed stations and Layover Facility. Information obtained from this review is provided in Table 10 below.

Table 10
Summary of PFAS Sites Location Within 1,000 Feet of
Proposed Stations and Layover Facility

Name/Address Map/Lot	Total PFAS Concentrations (ppt) from Data Sample Map	Database(s)	Distance/ Direction	Comments
Proposed Bedford/Manchester Station, Bedford, New Hampshire				
St. Gobain Performance Plastics, 701 Daniel Webster Highway, Merrimack, NH	Total PFAS nearest sampling point 880 ft south 773 ppt	SHWS	1.2 miles southwest, cross-gradient	<p>According to the Data Sample Map, the proposed Bedford/Manchester Station is located within the Preliminary Groundwater Management Zone (Pre-GMZ) of the St. Gobain Performance Plastics (SGPP) Consent Decree Area (March 2018). According to an April 2019 Site Investigation (Golder, 2019), the extent of PFOA detections above the AGQS in groundwater is potentially associated with aerial deposition from the SGPP facility is within the pre-GMZ established by NHDES. Highest concentrations of PFOA are found in shallow overburden groundwater and decrease with depth. SGPP has been monitoring residential wells to confirm that PFAS concentrations in groundwater continue to meet AGQS within and near the perimeter of the pre-GMZ (Golder, 2019). PFAS detections within the pre-GMZ may also be attributable to sources other than the SGPP facility.</p> <p>According to a January 5, 2021 letter from NHDES to SGPP, the entire consent decree outer boundary is located within the modeled air deposition area for PFOA release from SGPP. In accordance with the consent decree and Env-Or 600, SGPP must investigate the entire area within the Consent Decree Outer Boundary to evaluate if air emissions from the facility contributed to violations of the AGQS. Eight potential or known contamination sources were</p>

Proposed Stations and Layover Facility**

Name/Address Map/Lot	Total PFAS Concentrations (ppt) from Data Sample Map	Database(s)	Distance/ Direction	Comments
				<p>identified by Golder which include the Bedford, Merrimack, Londonderry and Litchfield Fire Stations, Merrimack Landfill, Hudson Landfill, and Manchester Airport. NHDES was not aware of any releases of firefighting foam at the fire stations. SGPP was responsible for providing alternative water to three residents in the vicinity of the Merrimack Landfill until they were able to provide sufficient data that PFAS releases in this area were not attributable to SGPP. NHDES requested in letters that the Town of Hudson conduct additional investigation to evaluate whether PFAS from the landfill site is contained within the existing landfill GMZ. While the landfill may be a potential source of PFAS in the Mayflower Drive wells, aerial deposition of PFAS released from the Saint-Gobain Facility cannot be ruled out as a contributor to the groundwater impacts in this neighborhood and requested that SGPP provide alternative water to three residents in this area. NHDES has requested Manchester Airport investigate the nature and extent of PFAS in this area related to releases from the airport. NHDES stated that while the airport may be a potential source of PFAS, aerial deposition of PFAS released from the SGPP facility can't be ruled out.</p> <p>Based on the June 2021 Biweekly Update to NHDES, bottled water is provided to residents over one mile northwest of the proposed station. The proposed station appears to be mapped partially in an area with alternative water sources and/or access to water main not likely.</p> <p>In July 2021, SGPP completed the installation and operation of a thermal oxidizer for control of PFAS emissions. The preliminary results show the outlet concentrations of PFOA and PFOS below the emissions limits.</p>

<p align="right">Summary Report and GMP renewal, noted PFAS compounds were found at the downgradient boundary of the GMZ and requested further evaluation of the GMZ.</p>				
Proposed Manchester Hybrid Station				
Energy North/Liberty Utilities, 130 Elm St., Map 752/Lot 1	NA	SHWS	500 feet south, cross-gradient	NHDES requested PFAS screening in May 2017 with a follow up letter in October 2017. On behalf of Liberty Utilities, GZA provided a letter, dated October 20, 2020, summarizing their screening for the need to sample for PFAS. GZA did not identify information that indicated past or present site activities had likely involved the use of PFAS-containing products and if sampling for PFAS were performed, the detection of PFAS would likely be related to off-site sources of PFAS.
Proposed Manchester Layover Facility				
Manchester Transit Authority, 110 Elm St., Map 836/Lot 6EX	PFAS > AGQS	PFAS, SHWS	Abuts to east, upgradient	NHDES requested PFAS screening in May 2017 with a follow up letter in October 2017. Initial sampling for PFAS in April 2018. PFAS detected ranging between 3 ppt to 24 ppt, above AGQS. NHDES requested additional sampling and discussion of historical operations of the site and surrounding properties. Additional sampling in 2020 identified PFOA concentrations ranging from 12.6 ppt to 25.1 ppt with highest concentrations on the upgradient portion of site. Potential on-site sources identified included on-site bus washing activities prior to 2000. PFAS may be a regional groundwater contamination issue.
St. Gobain Performance Plastics, 701 Daniel Webster Highway, Merrimack, NH	NA	SHWS	5.6 miles south, cross-gradient	The Pre-GMZ boundary for the SGPP site is located approximately 770 feet south of the proposed Layover Facility. No PFAS sampling locations were mapped within 1,000 feet of the proposed station.

8. Summary and Conclusions

AECOM Technical Services, Inc. (AECOM) has prepared this Hazardous Waste Site/Contamination Inventory and PFAS Evaluation as outlined in AECOM's Scope of Services for the Nashua-Manchester 40818 (Capital Corridor) prepared for the NHDOT dated September 2020 subject to the Limitations presented in Section 1.1 and 1.2. Based on the assessment performed AECOM offers the following summary and conclusions. Contaminated sites of concern for the project limits have been summarized in Table 11 below.

8.1 Proposed Pheasant Lane Mall Station

Based on AECOM's review of historical site use and historical surrounding site use, no historical on or off-site concerns were identified.

Three properties were identified within 1,000 feet of the proposed Pheasant Lane Mall Station listed on a contaminant-related database. Based on AECOM's review and analysis of the database listings, none of the surrounding sites are expected to present an environmental concern to the proposed station based on their distance, regulatory status (i.e., regulatory closure, no violations found), media impacted (soil only), and/or topographical position relative to the proposed station (i.e., down-gradient or cross-gradient).

One landfill, the Webster Square Shopping Center, was identified approximately 3,000 feet northwest and cross-gradient of the project limits. Based on regulatory status, distance and/or topography, the landfill is not considered an environmental concern for the proposed Pheasant Lane Mall Station.

8.2 Proposed Nashua Crown Street Station

A portion of the project limits, primarily developed Park and Ride, is listed on the SHWS/LUST/Brownfield database under Triangle Pacific Corporation located at 25 Crown Street. The LUST listing is closed. Historically CVOCs have been present in groundwater above AGQS. The most recent groundwater sampling in 2017 did not identify any VOCs above AGQS. However, the NHDES requested additional groundwater sampling as VOCs were present above laboratory detection limits and there was the potential for an intermittent source not previously identified to be present. In AECOM's opinion, based on regulatory status (active), there is a potential for low levels of CVOC to be present in associated with this SHWS listing.

Six properties were identified within a 1,000-foot radius of the proposed station listed on a contaminant-related database. Based on AECOM's review and analysis of the database listings, none of the surrounding sites are expected to present an environmental concern to the proposed station based on their distance, regulatory status (i.e., regulatory closure, no violations found), media impacted (soil only), and/or topographical position relative to the proposed station (i.e., down-gradient or cross-gradient).

Six landfills were identified within 4,000 feet of the proposed Crown Street Station. In AECOM's opinion, based on distance, groundwater flow, and or status, none of these landfills are considered to pose an environmental concern for the proposed Crown Street Station.

8.3 Proposed Bedford/Manchester Station

Based on AECOM's review of historical site use and historical surrounding site use, no historical on or off-site concerns were identified, except as noted below.

Two properties were identified within a 1,000-foot radius of the proposed station listed on a contaminant-related database. Based on AECOM's review and analysis of the database listings, neither of the surrounding sites are expected to present an environmental concern to the proposed station based on their distance, regulatory status (i.e., regulatory closure, no violations found), media impacted (soil only), and/or topographical position relative to the proposed station (i.e., down-gradient or cross-gradient).

No landfills were identified within 4,000 feet of the proposed Bedford/Manchester Station.

The proposed Bedford/Manchester Station is located within the Pre-GMZ of the SGPP Consent Decree Area (March 2018). According to an April 2019 Site Assessment, the extent of PFOA detections above the AGQS in groundwater is potentially associated with aerial deposition from the SGPP facility and is within the Pre-GMZ established by NHDES. SGPP is currently monitoring residential wells to confirm that PFAS concentrations in groundwater continue to meet AGQS within and near the perimeter of the pre-GMZ. PFAS detections within the pre-GMZ may also be attributable to sources other than the SGPP facility. In July 2021, SGPP completed the installation and operation of a thermal oxidizer for control of PFAS emissions. The preliminary results show the outlet concentrations of PFOA and PFOS below the emissions limits. In AECOM's opinion, based on aerial distribution from the SGPP, and the proposed station being located within the Pre-GMZ, there is a potential concern for the presence of PFAS-impacted soil and groundwater at the proposed station.

8.4 Proposed Manchester Hybrid Station

Based on AECOM's review of historical site use, a former filling station was located at the southwest corner of Granite Street and Canal Street from at least 1971 through 1975. By the mid-1980s, this lot is depicted as grassy and appears to be paved by the late 1980s. No additional information pertaining to the former filling station was obtained during the course of this assessment. Additionally, this former filling station was not identified on any environmental databases searched as part of this investigation and is therefore, not considered an environmental concern. The northern portion of the Proposed Hybrid Station will be utilized for parking and no significant construction activities are proposed for this area. No additional on or off-site historical concerns were identified.

Based on AECOM's review, 30 properties were identified within a 1,000-foot radius of the project limits listed on a contaminant-related database and are summarized below. Seven of the 30 sites have not achieved regulatory closure. Based on AECOM's review and analysis of the database listings, none of the surrounding sites are expected to present an environmental concern to the proposed station based on their distance, regulatory status (i.e., regulatory closure, no violations found), media impacted (soil only), and/or topographical position relative to the proposed station (i.e., down-gradient or cross-gradient) with the exception of the following:

- Based on AECOM's review of database listings and NHDES files, a former 8,000-gallon PCE AST was located approximately 25 feet west of the proposed project limits. Several investigations have been conducted under NHDES #'s 198711011 and 199109022 (Rubenstein B&M and B&M/Danais). The status of the B&M/Danais site is listed as unassigned while the status of the Rubenstein B&M case is closed.

The Rubenstein B&M site formerly operated as a B&M yard as a fueling station, switchyard, and boxcar storage yard. The property was sold to Sol Rubenstein in 1966 and used as a scrap metal yard with a portion leased to B&M for fueling with a 20,000-gallon diesel AST. Additionally, a portion of this property was leased to John Danais, a regional distributor of dry cleaning products from 1964 to 1988 and maintained an 8,000-gallon PCE AST which had releases. The former PCE tank was removed in March 1988 and between 1996 and 2004, several tons of PCE-impacted soil had been removed from in and downgradient of the release area. In 2009, NHDES requested Pan AM to perform a site investigation and remedial work. Pan AM provided a scope of work, dated July 2009, to provide further interpretation of the results of a "Saturated Zone Source Characterization Activities Report" prepared by Aries in 2008 and to complete the delineation of PCE impacted soil and groundwater. On January 13, 2011, NHDES verbally requested a revised scope of work that took into consideration the supplemental site investigation work performed in 2010 (NHDES #200502058-Hilton Garden Inn). The 2008 Certificate of Completion for NHDES #200502058 indicated that groundwater monitoring should continue in accordance with the groundwater management permit for NHDES # 199109022-M-002 (B&M/John Danais site). That permit expired June 26, 2007 and has not been renewed. No additional information was provided in the NHDES online files. In AECOM's opinion, based on proximity to the former PCE AST, the former PCE AST and associated releases to soil and groundwater are considered environmental concerns for the proposed station.

- Hermsdorf Fixtures, 108 Franklin Street, located approximately 250 feet east and upgradient of the proposed station and is listed on the UST, ALLSITES (NHDES # 199407080), RCRA NonGen/NLR, and AIRS databases. The facility operated as a machine shop. A former 20,000-gallon #6 fuel oil UST was removed 1989 and replaced with a 15,000-gallon #4 heating oil UST. Soil and groundwater impacts include gasoline, CVOCs and PAHs. As of most recent sampling benzene and naphthalene exceeded AGQS. The facility entered into GMP in 2021. In AECOM's opinion, based on proximity, topographic position (upgradient) and regulatory status (active), this site is considered a potential environmental concern to groundwater beneath the proposed station.
- Energy North/Liberty Utilities, 130 Elm Street, located approximately 500 feet south and cross-gradient of the proposed station is listed on the SHWS and AIRS databases. Historical data suggest that SVOCs, arsenic, and lead were generally present in surface and shallow subsurface soils throughout much of the site above NHDES RCMP Method 1 S-3 standards. Based on the 2020 Annual Report, concentrations of PCE, TCE, benzene, toluene, ethylbenzene, 1,2,4-trimethylbenzene, naphthalene, and styrene are present in groundwater above AGQS. DNAPL was present in seven monitoring wells located along the downgradient (western) property boundary and adjacent to the Merrimack River. LNAPL was identified in six wells associated with the former Steel Oil Gas Tank #1, located on the eastern (Elm Street) side of the site. The GMZ for this site extends as far west as the Merrimack River beyond the Delta Dental Stadium and as far east as the eastern property boundary along Elm Street. A portion of the proposed station as well as planned access road from Valley Street are located within the GMZ of this site. In AECOM's opinion, there is a potential for impacted soil and groundwater associated with this site be located within the southern portion of the project limits and is considered an environmental concern.

Three landfills were identified within 4,000 feet of the proposed Manchester Hybrid Station. In AECOM's opinion, based on distance, groundwater flow, and/or regulatory status, none of the landfills are considered to pose an environmental concern for the proposed Manchester Hybrid Station.

8.5 Proposed Layover Facility

Based on AECOM's review of historical resources, the Manchester Gas Works or Energy North (former MGP plant), located adjacent to the project limits to the northeast, operated from the early 1850s through the mid-1970s. Additional information pertaining to this site is provided below. In AECOM's opinion, the former operation of the MGP with documented releases is considered an environmental concern for the proposed Layover Facility.

Based on AECOM's review, 20 properties were identified within a 1,000-foot radius of the project limits listed on a contaminant-related database. Seven of the 20 sites have not achieved regulatory closure. Based on AECOM's review and analysis of the database listings, none of the surrounding sites are expected to present an environmental concern to the proposed station based on their distance, regulatory status (i.e., regulatory closure, no violations found), media impacted (soil only), and/or topographical position relative to the proposed station (i.e., down-gradient or cross-gradient) with the exception of the following (including Energy North noted above):

- Energy North/Liberty Utilities, 130 Elm Street, located approximately 130 feet east and upgradient and is listed on the SHWS and AIRS databases. Details pertaining to this site are provided above in **Section 8.4**. Based on the presence of MGP impacts extending as far west and into the Merrimack River, in AECOM's opinion, this site is considered an environmental concern for the proposed Layover Facility. Additionally, PCE and TCE detected in groundwater at the MGP site were not considered compounds of concerns at the MGP and likely attributable to an off-site source.
- Manchester Transit Authority, 110 Elm Street, located abutting the project limits to the east and upgradient, is listed on the Brownfields, SHWS, LUST, ALLSITES, Spills, and PFAS databases. During a subsurface investigation in 2002 to assess soil in the vicinity of a former waste oil UST and maintenance garage, TPH was identified in soil at 60,400 mg/kg, which was above the SRS of 10,000 mg/kg. Petroleum contamination in soil and groundwater was assumed to be associated with a release

near the UST and pump island. BTEX and MTBE in groundwater attenuated by 2000 and 2011, respectively. A GMP was issued in 2001. CVOC impacts in site groundwater above GW-1 and GW-2 were identified near the removed USTs and are thought to be associated with either the former waste oil UST or from off-site upgradient property. The LUST listing was closed 2005.

Groundwater sampling continued under GMP. In 2015, due to increasing trends of PCE, NHDES requested a plan to evaluate the source of PCE. In May 2017, NHDES requested initial PFAS screening. In 2019, a release of hydraulic oil occurred in the garage. Based on files reviewed, additional subsurface investigations in 2020 identified TPH in once soil sample above the SRS. No PAHs or TPH were detected above AGQS in groundwater samples. CVOCs were detected in groundwater above AGQS. Initial PFAS sampling was completed in 2020, and PFOA was detected above the AGQS, with the highest concentrations in the upgradient well. A review of NHDES files was conducted in order to further evaluate the potential source of CVOCs in groundwater. Based on data reviewed, the extent of CVOCs in groundwater at the off-site upgradient former Electropac site was not well defined and could represent a regional groundwater quality issue. An additional SSI was proposed for 2021. In AECOM's opinion, based on current status and proximity, this site is considered an environmental concern to the proposed Layover Facility.

Table 11
Summary of Contaminated Sites of Concern Within 1,000 Feet of
Proposed Stations and Layover Facility

Name/Address	DES #	Dist/Direction	Comments
Triangle Pacific, 25 Crown St., Nashua	199402011	Portion of proposed Crown Street Station	Historically CVOCs have been present in groundwater above AGQS. The most recent groundwater sampling in 2017 did not identify any VOCs above AGQS. However, the NHDES requested additional groundwater sampling as VOCs were present above laboratory detection limits and there was the potential for an intermittent source not previously identified to be present. In AECOM's opinion, based on regulatory status (active), there is a potential for low levels of CVOC to be present in associated with this SHWS listing at the proposed Crown Street Station.
SGPP, 701 Daniel Webster Hwy, Merrimack, NH	199712055	1.2 miles southwest, cross-gradient	The proposed Bedford/Manchester Station is located within the Pre-GMZ of the SGPP Consent Decree Area. According to an April 2019 Site Assessment, the extent of PFOA detections above the AGQS in groundwater is potentially associated with aerial deposition from the SGPP facility and is within the Pre-GMZ established by NHDES. In AECOM's opinion, based on aerial distribution from the SGPP, and the proposed station being located within the Pre-GMZ, there is a potential concern for the presence of PFAS-impacted soil and groundwater at the proposed Bedford/Manchester station.
B&M/Danais, South End of Canal St., Manchester	199109022	Abuts to west (downgradient) of proposed Manchester Hybrid Station	PCE AST removed in 1988 and between 1996 and 2004, several tons of PCE-impacted soil had been removed from in and downgradient of the release area. In AECOM's opinion, based on proximity to the former PCE AST, the former PCE AST and associated releases may have resulted in CVOC impacts to soil and groundwater at both the proposed Manchester Hybrid Station and Layover Facility .
Hermsdorf Fixtures, 108 Franklin St., Manchester	199407080	250 east, upgradient	Soil and groundwater impacts include gasoline, CVOCs and PAHs. As of most recent sampling benzene and naphthalene exceeded AGQS. The facility entered into GMP in 2021. In AECOM's opinion, based on proximity, topographic position (upgradient) and regulatory status (active), there is a potential for CVOC and petroleum impacts to groundwater at the proposed Manchester Hybrid Station .

Liberty Utilities/Energy North, 130 Elm St., Manchester	200003011	130 feet east, upgradient of Layover Facility and 500 feet south, cross-gradient of hybrid station	Historical data suggest that SVOCs, arsenic, and lead were generally present in surface and shallow subsurface soils throughout much of the site above NHDES RCMP Method 1 S-3 standards. Based on the 2020 Annual Report, concentrations of PCE, TCE, benzene, toluene, ethylbenzene, 1,2,4-trimethylbenzene, naphthalene, and styrene are present in groundwater above AGQS. DNAPL was present in seven monitoring wells located along the downgradient (western) property boundary and adjacent to the Merrimack River. LNAPL was identified in six wells located on the eastern (Elm Street) side of the site. The GMZ for this site extends as far west as the Merrimack River beyond the Delta Dental Stadium and as far east as the eastern property boundary along Elm Street. A portion of the proposed Manchester Hybrid Station as well as planned access road from Valley Street are located within the GMZ of this site. In AECOM's opinion, there is a potential for CVOC and petroleum-impacted soil and/or groundwater associated with this site be located within the southern portion of the project limits for the proposed Manchester Hybrid Station as well as the proposed Layover Facility .
Manchester Transit Authority, 110 Elm St., Manchester	199712026	Abuts proposed Layover Facility to east, upgradient	Subsurface investigations in 2020 identified TPH in one soil sample above the SRS and CVOCs in groundwater above AGQS. Initial PFAS sampling was completed in 2020 and PFOA was detected above the AGQS, with the highest concentrations in the upgradient well. A review of NHDES files was conducted in order to further evaluate the potential source of CVOCs in groundwater. Based on data reviewed, the extent of CVOCs in groundwater at the off-site upgradient former Electropac site was not well defined and could represent a regional groundwater quality issue. An additional SSI was proposed for 2021. In AECOM's opinion, based on current status and proximity, there is a potential for CVOC and PFAS-impacted groundwater to impact the proposed Layover Facility .

8.6 PFAS Evaluation

No PFAS sites were identified within 1,000 feet of the proposed Pheasant Lane Mall Station, or proposed Manchester Hybrid Station. One PFAS site, Roussel Park, was identified approximately 300 feet southwest and cross-gradient of the proposed Crown Street Station. PFAS above AGQS were identified at this property with concentrations at the downgradient (eastern border) requiring additional investigation. In AECOM's opinion, based on distance and gradient, this PFAS site is not considered a concern for the proposed Crown Street Station.

The proposed Bedford/Manchester site is located within the Pre-GMZ of the SGPP facility and the proposed Layover Facility is located within 1,000 feet of the Pre-GMZ. According to an April 2019 Site Investigation Report (Golder, 2019), the extent of PFOA detections above the AGQS in groundwater is potentially associated with aerial deposition from the SGPP facility and is within the Pre-GMZ established by NHDES. Highest concentrations of PFOA are found in shallow overburden groundwater and decreases with depth. SGPP has been monitoring residential wells to confirm that PFAS concentrations in groundwater continue to meet AGQS within and near the perimeter of the Pre-GMZ (Golder, 2019). PFAS detections within the Pre-GMZ may also be attributable to sources other than the SGPP facility.

Based on the June 2021 Biweekly Update to NHDES, bottled water is provided to residents over one mile northwest of the proposed station. The proposed Bedford/Manchester Station appears to be mapped partially in an area with alternative water sources and/or access to water main are not likely. In July 2021, SGPP completed the installation

and operation of a thermal oxidizer for control of PFAS emissions. The preliminary results show the outlet concentrations of PFOA and PFOS below the emissions limits. In AECOM's opinion, based on the proposed Bedford/Manchester Station being located within the Pre-GMZ for the SGPP facility, PFAS in soil and groundwater are considered a concern for proposed station.

The Manchester Transit Authority abuts the proposed Layover Facility to the east and is upgradient. PFAS have been identified in groundwater at this location above AGQS; however, the higher concentrations appear to be in the upgradient well suggesting that PFAS are migrating onto the transit authority property from off-site. In AECOM's opinion, based on the presence of PFAS above AGQS at this abutting property, PFAS in groundwater are considered a concern for the proposed Layover Facility.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/29/2021 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/22/2021 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 5 RCRA-VSQG sites within approximately 0.25 miles of the target property.

NH SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Services' Hazardous Waste Inventory list.

A review of the NH SHWS list, as provided by EDR, and dated 05/03/2021 has revealed that there are 7 NH SHWS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal landfill and/or solid waste disposal site lists

NH SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Services' list: Landfills Operating in 1990 that Received Municipal Solid Waste/Landfills that Discontinued Receiving Municipal Solid Waste.

A review of the NH SWF/LF list, as provided by EDR, and dated 07/07/2021 has revealed that there is 1 NH SWF/LF site within approximately 0.5 miles of the target property.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Hazardous Waste Summary:

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D018
Waste Description: BENZENE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL

information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR EMISSIONS CLASSIFICATION UNKNOWN

AIR SYNTHETIC MINOR

TSCA SUBMITTER

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

OSHA ESTABLISHMENT

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

List of NAICS Codes and Descriptions:

NAICS Code: 3251
NAICS Description: BASIC CHEMICAL MANUFACTURING

NAICS Code: 32511
NAICS Description: PETROCHEMICAL MANUFACTURING

NAICS Code: 325188
NAICS Description: ALL OTHER BASIC INORGANIC CHEMICAL MANUFACTURING

NAICS Code: 32532
NAICS Description: PESTICIDE AND OTHER AGRICULTURAL CHEMICAL MANUFACTURING

NAICS Code: 325611
NAICS Description: SOAP AND OTHER DETERGENT MANUFACTURING

NAICS Code: 325613
NAICS Description: SURFACE ACTIVE AGENT MANUFACTURING

NAICS Code: 325998
NAICS Description: ALL OTHER MISCELLANEOUS CHEMICAL PRODUCT AND PREPARATION MANUFACTURING

NAICS Code: 56291
NAICS Description: REMEDIATION SERVICES
