RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that there are 94 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

MANCHESTER GAS WORKS	130 ELM STREET	SSE 0 - 1/8 (0.125 mi.)	T113	496

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 10 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

 Recipient Name: Southern New Hampshire Planning Commission
 Grant Type: Assessment
 Property Number: M836 L6EX
 Parcel size: 7.28
 Latitude: 42.9776919
 Longitude: -71.4630607
 HCM Label: Interpolation-Satellite
 Map Scale: -
 Point of Reference: Center of a Facility or Station
 Highlights: The subject property consists of an irregularly shaped 7.28 acre parcel of land improved with two buildings. The main building is a 33,600 square foot building used as the offices for MTA, the repair area for municipally owned buses, and an interior parking area for MTA vehicles. A smaller 1,600 square foot building used as a drive through vehicle wash is located off the southwest corner of the main building. Contamination is present on the subject property in the form of dissolved phase hydrocarbons in the groundwater. Numerous investigations have occurred on the property, which resulted in a groundwater management permit being placed on the property which requires semi-annual groundwater monitoring and reporting. A deed restriction is present on the property that prohibits the use of groundwater at the site. The source of the contamination has not been determined. Former Use: The subject property consists of an irregularly shaped 7.28 acre parcel of land improved with two buildings. The main building is a 33,600 square foot building used as the offices for MTA, the repair area for municipally owned buses, and an interior parking area for MTA vehicles. A smaller 1,600 square foot building used as a drive through vehicle wash is located off the southwest corner of the main building. All historic information obtained indicated that the property was undeveloped until the present structure was constructed in 1974/1975. It should be noted that the area surrounding the property was developed prior to 1885. Earliest records obtained during our research indicate that several established industrial properties gas & light plant to the north, slaughter house to the south, and B&M Railroad to the west were depicted in the 1885 Sanborn Map.

Hazardous Waste Summary:

Waste Code: F037
Waste Description: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Highlights:	<p>The subject property is comprised of one approximately 1.03-acre parcel of land located at the intersection of Granite and Second Streets in Manchester. The property currently consists of a level, undeveloped, vacant lot that is approximately 150 feet above sea level and approximately 200 west of the nearby Merrimack River. Area topography gently slopes southeast towards the Merrimack River. Four USTs were identified during the Phase II work, these USTs were removed from the property on December 21, 2009. Low levels of contamination were identified during the Phase II work. Former Use: The subject property is comprised of one approximately 1.03-acre parcel of land located at the intersection of Granite and Second Streets in Manchester. The property currently consists of a level, undeveloped, vacant lot that is approximately 150 feet above sea level and approximately 200 west of the nearby Merrimack River. Area topography gently slopes southeast towards the Merrimack River. A gasoline service station was located on the site along Granite Street from at least 1950 to 1954. Based on deed information, Mobil Oil Corporation owned the site from 1969 to 1982 and appears to have operated a gasoline service station on the site along Granite Street. A Preliminary Site Investigation completed in 2000 revealed the presence of methyl tertiary butyl ether MTBE above New Hampshire Department of Environmental Services DES Ambient Groundwater Quality Standards AGQS along with additional volatile organic compounds VOCs, consistent with a release of gasoline. Based on available database and local records, MTBE and 1,2,4-trimethylbenzene were detected in groundwater at the subject site in April 2008 at concentrations above the DES AGQS. A Gulf Express gasoline station is located northwest and upgradient of the subject site and had a documented release of petroleum associated with the station's former USTs. Based on studies completed by Environmental Compliance Services ECS, the extent of contamination emanating from the Gulf Express was not defined and appears to have impacted the Granite Landing site. Based on the presence of MTBE and 1,2,4-trimethylbenzene at concentrations above the DES AGQS, a REC exists for the site.</p>

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

 The subject property is comprised of one 1 6.487-acre irregularly shaped parcel of land located at 52-62 Elm Street in Manchester, New Hampshire. Three buildings are currently located on the property, and are occupied by Scott s Performance Auto, Curly s Carpets, Paul's Executive Car Care, JGE Enterprises a construction contractor, Expedition Drilling, NMS Auto Repair and Body, and a foreign automotive shop. Two of the buildings were formerly a single building constructed in 1925, occupied primarily by a banana distribution warehouse. Former Use: The property was historically used as a warehouse with heavy truck traffic dating back to 1925. The site was formerly used as a petroleum fueling station in two locations on the site from sometime between 1915 and 1950 to sometime between 1983 and 1989. Numerous automotive repair businesses have used the property in

traffic dating back to 1925. The site was formerly used as a petroleum fueling station in two locations on the site from sometime between 1915 and 1950 to sometime between 1983 and 1989. Numerous automotive repair businesses have used the property in the past and the present. Historic aerial photos and information provided indicates that the western portion of the property was used for the storage of junk vehicles. The western portion of the site was covered with large piles of soil from the adjacent reconstruction of the former JacPac Foods property which had documented benzene, TCE and MTBE contaminated soil on the property.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA Assessment, Cleanup and Redevelopment Exchange System (ACRES) is an federal online database for Brownfields Grantees to electronically submit data directly to EPA.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Highlights: Property is currently undergoing redevelopment by Anagnost Companies
 Former Use: The Site is located on the western side of Willow Street in a commercially-zoned area. The Site consists of two parcels, the Site Building (Map 733, Lot 19) and a parking lot area to the south of the Site Building (Map 733, Lot 18). The Site is abutted by a vacant lot to the north, Willow Street to the east, beyond which are multiple commercial properties, a residential property to the south, and an old spur of the Boston & Maine (B&M) Railroad to the west, beyond which are multiple commercial properties. The Site had been used as a mill building for manufacturing since 1880 when the Site building was built. From 1915 through 1979 the site was used for shoe manufacturing. Since 1979 the Site had been occupied and operated by Electropac which manufactured printed circuit boards used by industrial and commercial manufacturers in the defense, medical, and other industries. The Site is developed with a four-story, approximately 105,537 square-foot brick structure. The Site building was constructed circa 1880 as a mill building. Asphalt-paved parking lots occupy the east and south portions of the Site property. The remainder of the Site is occupied by concrete walkways and limited landscaped areas.

Highlights: Property is currently undergoing redevelopment by Anagnost Companies
Former Use: The Site is located on the western side of Willow Street in a commercially-zoned area. The Site consists of two parcels, the Site Building (Map 733, Lot 19) and a parking lot area to the south of the Site Building (Map 733, Lot 18). The Site is abutted by a vacant lot to the north, Willow Street to the east, beyond which are multiple commercial properties, a residential property to the south, and an old spur of the Boston & Maine (B&M) Railroad to the west, beyond which are multiple commercial properties. The Site had been used as a mill building for manufacturing since 1880 when the Site building was built. From 1915 through 1979 the site was used for shoe manufacturing. Since 1979 the Site had been occupied and operated by Electropac which manufactured printed circuit boards used by industrial and commercial manufacturers in the defense, medical, and other industries. The Site is developed with a four-story, approximately 105,537 square-foot brick structure. The Site building was constructed circa 1880 as a mill building. Asphalt-paved parking lots occupy the east and south portions of the Site property. The remainder of the Site is occupied by concrete walkways and limited landscaped areas.

Highlights: The Site is approximately 0.81-acres located at the intersection of Bedford and Spring Streets in Manchester, NH, in a mixed commercial/industrial/residential area. Past uses of the property from at least 1897 through until 1950 included industrial textile manufacturing operations as part of the Amoskeag Millyard Mixed Use District. The Site was initially one parcel owned by the City but was subsequently subdivided and is now comprised of two contiguous parcels, one owned by the City and the other owned by Bedford Lot Venture, LLC. The Site is currently operated by the City of Manchester Traffic Department as a municipal parking lot but a hotel and parking garage is planned for the site. Former Use: The Site consists of approximately 0.81-acre Site is located at the intersection of Bedford and Spring Streets in Manchester, NH. Highlights:	<p>The Site is approximately 0.81-acres located at the intersection of Bedford and Spring Streets in Manchester, NH, in a mixed commercial/industrial/residential area. Past uses of the property from at least 1897 through until 1950 included industrial textile manufacturing operations as part of the Amoskeag Millyard Mixed Use District. The Site was initially one parcel owned by the City but was subsequently subdivided and is now comprised of two contiguous parcels, one owned by the City and the other owned by Bedford Lot Venture, LLC. The Site is currently operated by the City of Manchester Traffic Department as a municipal parking lot but a hotel and parking garage is planned for the site. Former Use: The Site consists of approximately 0.81-acre Site is located at the intersection of Bedford and Spring Streets in Manchester, NH. The Site was initially one parcel owned by the City but was subsequently subdivided and is now comprised of two contiguous parcels, one owned by the City and the other owned by Bedford Lot Venture, LLC. The Site is currently operated by the City of Manchester Traffic Department as a municipal parking lot but a hotel and parking garage is planned for the site. The Site is located in a predominately commercial and residential area located in Manchester, NH. Properties to the north, south east, and west are generally occupied by commercial development with residential apartment complexes throughout. Based on information obtained during TRC s 2015 Phase I Environmental Site Assessment (ESA), the Site was used as part of a textile mill since at least 1897 until the Site building were removed between the years of 1954 through 1964. The City of Manchester took possession of the Site in the late 1980s where the Site was developed as a municipal parking lot until present day.</p>
