# **SECTION 801 – PROJECT TIPS**

801.1 - PROJECT START UP

801.2 - PROJECT SUSPENSION

801.3 - PROJECT TERMINATION

## 801.1 - PROJECT START UP

The following is a list of helpful tips to remember during the start of a project.

**Note**: These tips are not necessarily in any specific order and may not apply to every project.

- Work that can be done between advertising and bid opening:
  - Get a copy of the plans and proposal and begin the review process.
  - Request from the office, via the District Construction Engineer, the following items:
    - o Design computations (printed and digital versions)
    - Project stamp
    - o List of known Right-of-Way agreements and conflicts
    - List of known utility agreements and conflicts
    - o Municipal Encroachment agreements
    - o Copies of correspondence to date
  - Review the contract documents for any unique project items or conditions.
  - Confer with the designer in charge of the project and inquire about possible contract work issues.

- Speak with the right–of–way agent responsible for agreements made for the project. Review ROW conflicts, agreements and landowner reactions.
- Confer with the NHDOT utility coordinator and obtain contact information for key utility company representatives. Inquire about utility company schedules.
- Visit the site and become familiar with the project.
- Work that can be done between bid opening and receiving Governor and Council (G&C) approval:
  - Set up the project records, including, but not limited to, the Record Book, Lab Book, and field notebooks (drainage, road, etc.). Follow the guidelines given in this manual.
  - Schedule a pre–survey meeting and request the initial layout.
  - Prepare an agenda for the pre-construction conference. Use the "boiler-plate" preconstruction minutes sample provided by the Construction office that may be found in the S:\Construction\Admin\Forms folder on the network drive. The boilerplate format may also be used when writing the draft of the minutes to be sent to the office for final draft and distribution. This sample should be used as a guide only and should be tailored to address the specifics of the current project.
  - Schedule the pre–construction conference. The meeting should be scheduled for a date after receiving Governor and Council approval has been given.
  - Determine the location on the project for the office trailer, being mindful of the trailer's weather exposure and access during all phases of construction. The trailer should not be located in a flood plain, for example, and the area around the trailer should be plowable during winter operations. It may be necessary to choose more than one possible location for the trailer, depending on the site conditions.
- Work to be done after receiving Governor and Council approval:
  - Request, through the District Construction Engineer, that the project be loaded into CMS.
  - Conduct the pre–construction conference.
  - Discuss any early submissions required of the contractor; this may be done before, during, and after the pre–construction conference.
  - Discuss the Storm Water Pollution Prevention Plan (SWPPP).
  - Discuss any demolition or removal plans.
  - Discuss the traffic control plans.
  - Discuss the documentation of traffic control devices for NCHRP 350 compliance.
  - Verify applicable Certificates of Compliance for materials to be used on the project.

- Discuss the Contractor's schedule.
- Discuss the Pit and Disposal Agreements.
- Discuss project–specific shop drawings.
- Discuss blasting plans.
- Verify Subcontractor approvals.
- Notify the construction office and the District Construction Engineer of the following:
  - Field Office Trailer location
  - Contact information
  - Start date of work
- Submit a press release announcing the project through the NHDOT Public Information Officer.
- Call the NHDOT Public Information Office at (603) 271–6495.
- Verify that the Contractor has the following postings for the project bulletin board:
  - Current employee and labor postings (Check with Labor Compliance Office)
  - Current U.S. Army Corps of Engineers Permits
  - Current Wetlands and Non-Site Specific Permits
- Verify the status of the U.S. Department of Environmental Protection's *Notice of Intent* (NOI), which should be checked prior to the start of work. The NOI must have an "ACTIVE" status for the Contractor to begin work. The NOI status may be verified on the EPA's "NPDES General Permit Inventory and eNOI Search Tool" webpage at the following URL:

https://www.epa.gov/npdes/stormwater-discharges-construction-activities#overview

The EPA may also be reached at 1 (866) 352–7755.

- Compile any other project information, if applicable.
- Document the entire project area with video and still images before starting operations, and maintain a video and still image record of the project as it proceeds.
- Contact the project area's abutters and meet with them face—to—face, if possible, to introduce them to the project and to discuss any issues that may arise. Use the "Intro" document found under the *Admin Forms* folder on the *S:*\ network drive for CMS projects. Include a business card with project phone numbers in the letter or to distribute at the face—to—face meetings.

 Notify the Bureau of Human Resource's Labor Compliance Officer and Bureau of Construction's Computer Coordinator for visits and/or set—ups at the office trailer for federal—aid projects and CMS projects, respectively.

- Maintain proper notes regarding the contractor's performance, contract plans, and environmental plans throughout the project to help with evaluations at the end of the project.
- At the beginning of the project, create and maintain issues lists (plan, bridge, etc.) and a Record Book "General Notes" page. These should be accessible to all on–site DOT personnel for comment throughout the project.

# 801.2 - PROJECT SUSPENSION

The following items should be addressed prior to a project's suspension:

- Schedule a Winter Suspension Meeting prior to October 15<sup>th</sup>; refer to *Subsection 104.03(D)* of the <u>Standard Specifications</u> for more information.
- Contact the construction office to issue a project suspension letter.
- Check with the Maintenance Bureau's District Engineer for their concerns prior to the project's suspension.
- Create the Contractor's punch list to complete prior to project suspension.
- Once any disturbed areas have been stabilized, discontinue erosion control monitoring.
- Cover or remove all construction signs.

## 801.3 - PROJECT TERMINATION

The following items should be addressed prior to a project's termination:

- Create the Contractor's final punch list.
- Set a date for the project final.
- Upon acceptance of the project, contact the Construction Office to issue a completion letter.
- The Contractor <u>and</u> the Construction Office shall file the EPA *Notice of Termination* (NOT) within 30 days of project termination.

The EPA's NOT form may be found at the EPA Website at the following URL:

https://www.epa.gov/npdes/stormwater-discharges-construction-activities#overview.

- Fill out the following forms found in *S:\Construction\Admin\Forms*:
  - Contractor Confidential Evaluation
  - Plan Evaluation

**Construction Manual** 

- Consultant Plan Evaluation
- Environmental Evaluation
- Summary of Non–Conforming Materials
- Completion Certificate and Contract Time Extension
- Complete all project records and submit them to Engineering as soon as possible (within 10 days is preferable, within 30 days is acceptable).
- Contact the construction office to change or cancel the project phone numbers
- Verify that the Contractor has properly removed the project trailer and cleaned up the site

## 802.1 – INTRODUCTION TO RECORD KEEPING PROCEDURES

The project records are an essential part of any construction project. They provide the means for checking and verifying the compliance of the project to the contract, they are the means by which the contract is paid, and they are the State's primary reference in the event of any future questions, problems, or litigation.

Project records consist of seven major items:

• Bound field notebooks and other miscellaneous source documents

Link to: Division 100 Division 200 Division 300 Division 400 Division 500 Division 600

Division 700 Division 800 Division 900 Master Table of Contents

- A Quantity Book for preparation of partial estimates
- Daily reports of construction operations, utility operations, and any extra work
- A Record Plan showing changes made during construction
- A Record Book consisting of item summary pages, substantiating documents, and calculation pages
- A correspondence folder
- A Lab Book

These project record items are discussed in detail in the following sections.

## A. Bound Field Notebooks

Bound field notebooks shall be purchased through the contract by the Contractor and paid per *Subsection 698.5.4* of the <u>Standard Specifications</u>. Maximum use shall be made of the bound field notebooks, completing computations in them whenever possible. Computed quantities in these notebooks should be totaled and checked, then posted directly to the Quantity Book.

# **B.** The Quantity Book

The Quantity Book provides up–to–date quantities for estimate preparation and payment. See the "Guidelines Pertaining to the Quantity Book" in <u>Section 803</u> and the sample Quantity Book in <u>Section 804</u> for more information.

## C. Daily Reports

Construction daily reports shall be completed for each day in CMS. A daily report must be submitted for each day and shift elapsing between the start and finish of the project, except when work is suspended. When the contractor or the engineers work on either a Saturday or Sunday, a daily report must be completed.

**Important**: The daily reports should constitute a diary covering all phases of the work.

Fill out the daily reports completely. The following list is a sample of the information to be included on the daily reports. This list is not all inclusive but should give the Contract Administrator and other project personnel an idea as to what activities and events should be recorded.

- Weather conditions
- Quantity and type of manpower and equipment used
- What and where operations and items are in progress, with specific information

• Information affecting the overall progress of the work, including the completeness of the various phases periodically throughout the work

- Accident information, on the proper accident report forms, supplied by the Construction Bureau office, must also be filled out and the office notified in the event of any and all accidents within the construction zone
- Discussions with local officials and landowners
- All utility meetings, phone calls, communications, discussions, and work performed relative to the project
- Discussions with the contractor that do not require a written letter but pertain to the work, public safety, or construction signing, including a record of any action taken
- Non-working days with an explanation for non-work day status
- Extenuating circumstances that may have a bearing on working days or time extensions
- Consultant inspector/tester names, times worked, and type of work performed
- The date the project is started, suspended, resumed, and completed as applicable; for CMS projects, these can be found under "Activity Items"
- Contractor's hours and project personnel hours
- Upon completion, the Daily Report shall be signed by the Contract Administrator
- Include any other information of importance to the project; be concise, but thorough, while keeping editorializing to a minimum

## D. Record Plans

The Record Plans shall consist of a full–size set of plans provided by the Engineering Audit Section at the beginning of a project. These plans are to be updated with actual measurements and information regarding changes made through the construction period. In the Engineering Audit Section at the end of the project, the Record Plans will become the project "As–Built" plans, and updated as necessary. Refer to *As–Built Plan Completion* under *Audit Phase 5* of the Engineering Audit Process Manual for more information.

## E. Record Book

The Record Book shall consist of Item Summary pages from CMS. It shall also include substantiating documents and calculation pages.

An Item Summary page is to be used for each individual item. Items with the same item number but different appropriation codes must have separate pages.

When an item of the contract is not used in the construction of the project, write "None" or "Item Eliminated" on the Item Summary page and explain the reason in the "Remarks" section of the summary page.

The second sheet of the Summary page is designed for the purpose of explaining item overruns and underruns. An explanation is required for:

- Variation (plus or minus) in cost exceeding 10% on items whose contract total exceeds \$1,000.00.
- Variation (plus or minus) in cost exceeding 50% on items whose contract total is less than or equal to \$1,000.00.

The project records should be kept up—to—date at all times. Record Book computations such as those for rock excavation should be legible, accurate, and complete. If the quantities in any given field book page, calculation sheet, or other source document are complete and have been checked, then the page total should be entered into the Record Book. Keeping the Record Book up—to—date helps minimize the time spent on finalizing the records at the end of the project.

# F. Correspondence Folder

Prior to and at the start of any project, the Contract Administrator should set up a filing system to collect, organize, and store all miscellaneous documentation received and/or created throughout the course of the project.

Perhaps the most important and universal folder needed in the filing system is the correspondence folder. The correspondence folder should include all documentation such as letters, e-mails, faxes, and letters-of-transmittals. It may also include other documentation, such as utility force account agreements and shop drawings.

However, it is up to the Contract Administrator to set up a filing system that is most appropriate for the size and nature of the job. For example, if it is a project where utility issues are expected to be on–going, the force account agreements and all other utility information may be better placed in their own folder.

The same holds true for shop drawings. If the only shop drawing required on the job is for traffic signs, then it may fit in the correspondence folder. But, if it is a bridge project, a separate folder for shop drawings is generally more appropriate.

Separate folders should always be created for payrolls (required on all Federal–aid projects) and the Storm Water Pollution Prevention Plan (SWPPP).

A blank "Table of Contents" shall be created and placed at the front of all folders for immediate updating as documentation is added to the folder.

## G. Lab Book

The final component of the project records is the Lab Book, which may be found in *S:\Construction\Admin\Forms\Lab Forms* folder. It is generally a separate three–ring binder that is used to hold copies of all field and/or lab test results. Information on all materials tested, such as sand, gravel, pavement, pavement markings, concrete, reinforcing steel, etc., should be included.

The Lab Book may be organized by using tab sheets to separate the different types of materials. On large projects, it may be appropriate to break the sections down even further. For example, soils testing may be broken down by item (sand, gravel, crushed gravel, etc.) and/or by test (proctors, density reports, gradations, etc.). Concrete may be broken down by type (AA, A, and B) and/or by category (mix designs, gradations, cylinder breaks, etc.).

**Note**: It doesn't matter exactly how the Lab Book is set up as long as it is organized and easy to follow.

The Summary of Non-conforming Materials (required on all projects with materials testing) is best located at the front of this book. Engineering Audit should be made aware of its location when turning in the project records.

Some testing reports may not fit into the Lab Book or even a separate folder. Structural steel inspection reports are generally quite numerous and take up a fair amount of space. It is not uncommon to place these reports in their own folder or binder.

## 802.2 - GENERAL INSTRUCTIONS

When entering information and data in the records, bear in mind that the records developed during construction are the only material available for preparation of the final estimate, and are the Department's best defense in any possible litigation. Therefore, all descriptive data and field measurements required for these purposes must be included.

# A. Record System Numbering

All pages of the record system must be uniquely numbered, indexed, and cross—indexed by project personnel. The bound field notebooks shall be numbered with two letters preceding the numerals. For example, "RN1–10" denotes roadway field notebook 1, page 10; "DN1–10" denotes drainage field notebook 1, page 10; and "BN2–10" denotes bridge field notebook 2, page 10.

The most important factor that influences the numbering system used is the project size. Large projects and projects with multiple appropriation codes require considerable planning and forethought. Without proper preparations, the numbers can get unwieldy and difficult to work with.

As far as Engineering Audit is concerned, the two most important aspects of numbering are uniqueness of numbers (i.e., the same number shall not be used twice), and item sequence. The contract bid items shall be sequenced in the order that they appear in the CMS Record Book. Items with multiple appropriation codes should have separate numbers and appear in sequence. The contract items should be followed by extra work, per specification work, and supplemental agreements. Refer to <u>Section 807</u> for suggested Record Book page numbering examples.

Bound field notebooks should be set up at the very beginning of the project. The Special Provisions should be reviewed carefully at the beginning of the project for unusual items that may differ in method of measurement and basis of payment.

# **B.** Certificates of Compliance

Certificates of Compliance should be placed in the Record Book (with the C.O.C. index) preceding the Item Summary pages and numbered appropriately. The file number shall be written in the upper right corner of each page. However, on projects with numerous certificates, a folder in the project files may be used. Contract Administrators are reminded that for materials requiring a Certificate of Compliance, no payment shall be made for the items of work in which said materials are to be incorporated until properly executed certificates have been accepted by the Contract Administrator.

# C. General Notes

The General Notes are an important part of the Record Book. General Notes are a collection of notes made by the Contract Administrator or other project personnel during construction of the project that reflect any major changes to the project, especially those changes that affect the payment of an item. General Notes should be placed in the front of the Record Book before the first Item Summary Page (see the sample Record Book in <u>Section 807</u> of this manual for an example). Include all information in the General Notes that might be essential in adjusting any claims that may arise.

## **D.** Field Measurements

The contractor should be notified when measurements pertaining to pay items of work are being made, and if the contractor desires, these measurements will be made in the presence of someone it delegates. Measurements on which the Contract Administrator and the contractor do not agree should be called to the attention of the District Construction Engineer. All transactions between the Contractor and the Contract Administrator that are likely to be protested, or where payments are involved, should be in writing.

Carry computations only to the decimal place that is consistent with the accuracy of the basic information. The quantities in the Record Book should be paid per the Method of Measurement outlined in the Standard Specifications. See the "Record Book Decimal"

Point System" tables found in the next subsection for information regarding the proper compilation procedures for Record Book data.

## E. Authorization of Records

Another important aspect of the project record–keeping system is the complete signing and dating of all notes, calculations, item summary entries, totals, and other information. Bound field notebooks should include signatures (or initials) and dates of project personnel responsible for posting, totaling, checking, and approving page entries. An item summary page approved by the Contract Administrator is an indication to the Engineering Audit Section that a competent check has been made of that item and that the Contract Administrator is satisfied with the figures.

# F. Project Records to Engineering Audit

When the project field records are complete, the Contract Administrator should refer to *Appendix A* of the <u>Engineering Audit Process Manual</u> to ensure all necessary information has been included.

All records, including source documents, are to be transferred to the Engineering Audit Section after completion of the project.

Upon completion of the audit by the Engineering Audit Section, the Contract Administrator will be provided an informational copy of the final estimate for their review.

# 802.3 - RECORD BOOK DECIMAL POINT SYSTEM

All items listed in the following tables should be calculated to the decimal point indicated. All others are to be figured to the nearest whole unit. These tables should be used as a guide only. Refer to the Method of Measurement in the specifications for a detailed description of specific payment units.

The following tables show Record Book decimal point systems for the indicated items.

	Record Book Decimal Point System (1)	
Item No(s).	Description	Method and Units of Measurement
202.41	Removal of Existing Pipe	1 ft
202.6	Curb Removal for Storage	1 ft
403.1 to 403.95	Hot Bituminous Pavements	0.1 ton
410.21 to 410.41	Asphalts for Tack and Surface Treatments	0.1 ton
411.1 to 411.4	Plant Mix Surface Treatments	0.1 ton
510	Bearing Piles	*
512	Preparation for Concrete Repairs	0.1 yd <sup>2</sup>
520	Concrete, non (F) items	0.1 yd <sup>3</sup>
570.9	Resetting Masonry Wall	0.1 yd <sup>3</sup>
572	Reconstructing Stone Walls	1 ft
583	Riprap	0.1 yd <sup>3</sup>
603.0001 to 603.7	Culverts and Storm Drains	1 ft
604.1 to 604.39	CB's, DI's, and MH's	0.1 units
604.4 and 604.5	Reconstructing Basins	0.1 ft
605	Underdrains	0.1 ft
606	Guardrail	0.1 ft

<sup>\*</sup> See table under Subsection 510.4.1 for Bearing Pile Method and Unit of Measurement

	Record Book Decimal Point System (2)	
Item No.	Description	Method and Units of Measurement
607	Fences	0.1 ft
609	Curbs	0.1 ft
614	Electrical Conduit	0.1 ft
642	Limestone	0.01 ton
643	Fertilizer	0.01 ton
645.1	Mulch	0.01 acre
645.71	Monitoring Erosion and Sediment Control	0.5 hrs
646	Turf Establishment	0.01 acre
698	Field Facilities	1/30 <sup>th</sup> month

# SECTION 803 – GUIDELINES PERTAINING TO THE QUANTITY BOOK

803.1 - GENERAL 803.2 - ITEM APPLICATIONS Clearing and Grubbing Α. В. **Excavation and Embankment** С. **Base Courses** D. **Pavements** E. **Bridge Items** F. Drainage G. **Linearly Measured Items** Н. Maintenance of Traffic General

## **803.1 – GENERAL**

The purpose of the Quantity Book is to keep a running total of the quantity of work performed. It provides a means of documentation for quantities used in preparation of partial estimates and lends itself to an operational audit at any time by project or non–project personnel.

The Quantity Book should be set up and numbered the same as the Record Book. It is important to identify source documentation for all Quantity Book entries. This will aid in any intermediate field audits and will allow the entry to be copied directly from the Quantity Book to the Record Book.

**Construction Manual** 

Whenever possible, entries in the Quantity Book should be made daily. Exact quantity entries are preferred, but there will be times when exact measurements are not able to be obtained. For example, in the case of an estimate period occurring in the middle of blasting operations, a reasonable ledge quantity will most likely have to be estimated. In these instances, approximate measurements and calculations shall be performed to arrive at a reasonable figure for entry.

Any quantities that are based on a tally or load count submitted by the Contractor must be substantiated by a periodic and documented check by field personnel. Any additional computations and measurements used to arrive at a quantity should be made either in the bound field notebooks or on loose paper that is properly referenced and retained in a separate folder. The Contract Administrator assigns specific items to each Inspector on the job and each Inspector is responsible for measuring, entering, and initialing all quantities they are assigned to cover. This separation of duties minimizes confusion and rework.

## 803.2 - ITEM APPLICATIONS

The following procedures are approved and satisfactory methods for the handling of some major items.

# A. Clearing and Grubbing

This item consists of three procedures: cutting, disposal, and grubbing (stump removal). At the start of the project, the Contract Administrator sets up a proportional system of payment when each procedure is completed for an area. For example, on a project with approximately equal cuts and fills, 40% could be paid for cutting, 20% for disposal, and the remaining 40% for grubbing.

These percentages may be varied for the individual project depending on the number of areas that would require grubbing. The land area can be computed on a station—to—station basis from the offsets in staking out or as an estimated percentage of the clearing areas shown on the plans. This land area, multiplied by the appropriate percentage, will give the quantity to enter daily.

# **B.** Excavation and Embankment

The Contract Administrator will establish partial estimate quantities for these items by an estimating system set up at the beginning of the project from quantities shown on the plans or cross—sections. The system chosen will be determined by the type of project and method of operation used by the contractor, and should be clearly stated on the Quantity Book Daily Summary page.

The Contract Administrator may find it useful to keep track of and compile running totals for quantities at each station with a Microsoft Excel® spreadsheet.

## C. Base Courses

Daily entries shall be the product of simple three–dimensional computations, or length times a constant if the template is being substantially filled. Where base courses are being constructed consistently day after day and a simple computation will adequately cover a number of days' work or the entire estimate period, it will be satisfactory to record only the stations covered daily and enter quantities at the end of the period or as segments of the work are completed. These items may also be paid from the information compiled on an Excel spreadsheet similar to excavation and embankment.

#### D. Pavements

Source information for bituminous pavement material should come from the weight slips as the paving material is delivered to the project site.

# E. Bridge Items

Many bridge items are paid for on a per unit basis. Often, construction of these items consists of delivery of the material, placing of the material, and a finishing or clean—up phase. To expedite a partial estimated payment, the Contract Administrator may use a percentage system based on the approximate cost of several phases of the construction of the item related to the total item bid price.

For example, structural steel might be paid on a basis of 75% of the total bid price for delivery, 20% for erection and bolting, and 5% for painting. The Contract Administrator should review this method of payment with the District Construction Engineer and the Contractor to ensure that the percentages used do not reflect payment in excess of the value of the work in place.

When reinforcing steel is paid for by the pound, partial estimates may be made on a similar percentage basis.

Bridge items paid for on a cubic yard basis require accurate engineering computations for final payment. Partial payments should be documented with approximate calculations of the volumes being constructed and the calculations should be retained in an appropriate project file.

# F. Drainage

Daily entries in the Quantity Book for drainage items shall come from measurements in the bound field notebooks. Where quantities must be computed and time available prevents them from being completed at the end of the day, make a simple approximate computation in the field notebook. Partial daily measurements may be kept in the field book until the end of the estimate period. If a particular run is not complete, this pay length must be **Construction Manual** 

indicated as "partial" so that it will not be confused with the final computations when totaling the notebook pages.

# **G.** Linearly Measured Items

Guardrail, fence, curb, and similar items may be measured by station—to—station runs and entered in the Quantity Book. Apply a percentage to the length relative to the portion of guardrail work done where only posts are set. Do the same for curb joints that are left unmortared; or for similar partly—constructed items, noting the percentage for each phase.

## H. Maintenance of Traffic

Establish a system of payment based on project activity or by dividing the unit item by the anticipated number of estimate periods. Record the system used under the remarks of the first entry to the Quantity Book.

## I. General

When payment is to be made for partially completed items, the Contract Administrator should use sound engineering judgment to determine a percentage for each phase of the work. Once the percentages are established, they should be recorded at the top of the daily summary page under the remarks of the first entry to the Quantity Book.

**Note**: The Quantity Book in CMS does not need to be printed for Engineering Audit.

Link to: Division 100 Division 200 Division 300 Division 400 Division 500 Division 600

Division 700 Division 800 Division 900 Master Table of Contents

# **SECTION 804 – SAMPLE QUANTITY BOOK**

Shown on the following pages are samples of acceptable methods of record keeping in the Quantity Book for both roadway and bridge construction projects.

If Excel spreadsheets are used to aid in the computation of repetitive quantities, it is important for auditing purposes that the spreadsheets show as much detail as hand calculations, and that includes showing all formulas.

		\$	State Of New Ha	ampshire /	Department	Of Transportatio	n

**Note**: Excavation not covered by cross–sections and rock excavation (boulders) should not be considered one and the same. Excavation not covered by cross–sections is measured before actual excavation starts and includes any mounds or objects above the ground surface that are not shown on the cross–sections, whereas boulders (rock excavation) are measured in their entirety.

<sup>\*</sup> The percentage of the unit paid upon installation of the sump and riser section should be mutually acceptable to the Contract Administrator and Contractor. It may also vary based on the depth of the structure. For example, a 16 ft deep CB = 2.0 units; therefore, pay  $0.75 \times 2 = 1.5$  units.

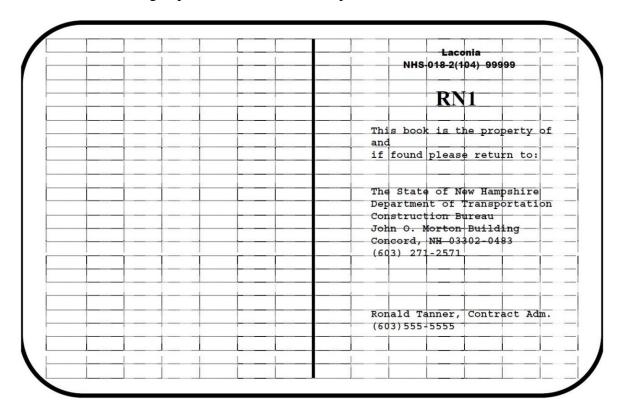

**Note**: If requested, the contractor is entitled to payment for materials on hand per Subsection 109.07 of the Standard Specifications. If so, the percentage paid upon installation must be adjusted accordingly

# SECTION 806 – GUIDELINES PERTAINING TO THE RECORD BOOK

## 806.1 - ITEM APPLICATIONS

- Final Pay Items
- Unit Items
- Excavation
- Embankment-in-Place
- Base Materials
- Bituminous Pavement
- Drainage
- Granite Curb
- Uniformed Officers and Flaggers
- Loam and Humus
- Mulch
- Miscellaneous

## 806.1 – ITEM APPLICATIONS

The following are approved and satisfactory methods of handling some of the major items. *Engineering Audit Guidelines* to these and other items may be found in *Appendix D* of the Engineering Audit Process Manual.

# Final Pay Items

Final Pay (F) items are designated with an "(F)" following the item description. Contract Administrators should refer to *Subsection 109.11 Final Pay Quantity* of the <u>Standard Specifications</u> for a complete definition of Final Pay (F) items. Final Pay (F) item quantities are estimated quantities.

The estimated bid quantity of a Final Pay (F) shall be the final pay quantity, unless the dimensions of any portion or the quantity of that item are revised by the Engineer, or the item or any portion of the item is eliminated. If the dimensions of any portion or the quantity of the item are revised, and the revision results in an increase or decrease in the estimated quantity of that item of work, the final pay quantity for the item will be revised in the amount represented by the changes in the dimensions or the quantity.

If a final pay item is eliminated, the estimated quantity for the item will be eliminated. If a portion of a final pay item is eliminated, the final pay quantity will be revised in the amount represented by the eliminated portion of the item of work.

The estimated quantity for each item of work designated as a final pay quantity in the Method of Measurement, Basis of Payment, or Bid Schedule shall be considered as approximate only, and no guarantee is made that the quantity that can be determined by computations, based on the details and dimensions shown on the plans, will equal the estimated quantity. No adjustment will be made in the event that the actual quantity based on measurements and/or computations does not equal the estimated quantity except under the following conditions:

Link to: Division 100 Division 200 Division 300 Division 400 Division 500 Division 600

Division 700 Division 800 Division 900 Master Table of Contents

**Construction Manual** 

**2016 NHDOT** Division 800

> • For Bridge Items: If the actual value\* of the discrepancy is either \$10,000.00 more or \$10,000.00 less than the estimated bid amount for the item, or the actual quantity is more than 125% or less than 75% of the estimated bid quantity for that bridge item on that structure, then an adjustment will be made in accordance with Subsection 109.04.3 Negotiated Prices of the Standard Specifications.

- \* Actual value is determined by materials, equipment, and labor, but not necessarily the bid price
- For Other Items: If the actual value\* of the discrepancy is either \$10,000.00 more or \$10,000.00 less than the estimated bid amount for the item, or the actual quantity is more than 125% or less than 75% of the estimated bid quantity, then an adjustment will be made in accordance with Subsection 109.04.3.
- \* Actual value is determined by materials, equipment, and labor, but not necessarily the bid price

These items may have multiple partial payment entries in the Quantity Book. The Record Book should have only one entry for the "Per Plan Final Pay (F) Quantity," and then separate entries for any physical changes ordered by the Contract Administrator or quantity adjustments as stated previously.

## Unit Items

Unit items, such as Item 619.1 Maintenance of Traffic should have partial payment entries made in the Quantity Book based on the number of estimates. There should be one entry for the "per plan quantity" in the Record Book upon completion of the item. Unit Item 645.7 Erosion and Sediment Control Stormwater Management Plan, and Item 692 Mobilization are to be paid for as outlined in the Standard Specifications under "Basis of Payment" in *Subsections 645.5.6* and *692.5.1*, respectively.

# Excavation

## Common Excavation

Before excavation is started, measure any material that is not included in the crosssections. "Excavation not covered by cross-sections" may include excavation of stonewalls, boulders, ledge outcrops, bituminous pavement, drives, etc. Also, measure obvious depressions or cellar holes that are not covered by the crosssections.

These volume totals should appear as an addition or deduction on the common excavation Record Book Item page. The Contract Administrator should inspect excavation areas on the project for these projections and depressions to determine those that are of sufficient size to materially affect the sectioned quantity. Projections and depressions of less than 5 yd<sup>3</sup> in volume seldom have a net effect that is uncompensated for by the average end area method used to compute the excavation quantity.

# Topsoil and Muck

Topsoil excavation applies to fill sections only. Material from cut sections should not be recorded with such quantities of topsoil. If a grade change is made in a topsoil area, indicate whether the change was made before or after topsoil removal. Topsoil depth measurements, at 50 ft intervals with varying lateral off–sets, should be taken to accurately calculate the average topsoil thickness.

If the topsoil layer varies considerably, cross—sectioning of the removal area is warranted. Where the average depth method is used, show the various depth checks, their locations, and the measurements used to produce the average depth.

**Note**: When topsoil depths exceed 2 ft, as per *Subsection 203.2.4* of the <u>Standard Specifications</u>, it is reclassified as muck and should be measured and paid for separately as per *Subsection 203.5.1.4*.

## Unclassified Excavation

On projects where excavation is unclassified or has been unclassified by the Contractor so that regular ledge sections are not required, the Contract Administrator shall provide elevations of the ledge on 50 ft sections in the area where the ledge slope line intersects the top of the ledge. A lack of stripping may make this difficult at times; however, even an approximate elevation will aid the Engineering Audit Section in computing final quantities of excavation through ledge areas that results in considerable over breakage. Refer to *Subsection 203.3.4 Unclassified Excavation* of the <u>Standard Specifications</u> for more information.

## Material Measured in Vehicles

Load Count Procedure: Load count is not recommended for measuring material in vehicles. However, when it becomes necessary to use load counts, set up a separate page in the Record Book or in a bound field notebook showing the following in detail in order to substantiate the quantity of the material paid for:

- The volume, in cubic yards per vehicle load. Show computations for each vehicle used, and the quantity to be paid for when measured by Load Count will be 80% of the loose volume of the load.
- o The total number of loads for each type of vehicle.
- o The total volume, in cubic yards delivered.

0

## • Embankment-in-Place

Contract Administrators should refer to *Section 203 Excavation and Embankment* of the <u>Standard Specifications</u> for pertinent information regarding embankment—in—place payment. Embankment—in—place is a Final Pay (F) item and should follow the requirements discussed under *Subsection 806.1* of this Manual.

The Contractor should be provided with a Pit Information form for each non-commercial pit used for project materials, and this form shall be properly completed and included in the project records. Pit and Disposal Agreements must be obtained prior to any material arriving on or leaving from the site, if required. Contract Administrators are advised to check with their District Construction Engineer if they believe these agreements are not required prior to material arriving on site.

#### Base Materials

Base materials, such as sand, gravel, and crushed gravel that are not Final Pay (F) items, may be entered in the Record Book as "Built per Plan," and the following statement shall be made on the page and signed by the Contract Administrator:

"This is to certify that this item was built per plan and that sufficient measurements and checks were made to verify substantial adherence to the plan dimensions. Measurements, computations, and adjustments were made where changes occurred."

## [Contract Administrator Signature]

There should be sufficient "spot check" information in the field notebooks to validate the assurances made in the signed statement. Many base material items are Final Pay (F) items and should follow the requirements discussed under *Section 806.1* of this manual.

# • Bituminous Pavement

Compile delivery slips for bituminous pavement materials in numerical order each day. With conventional plants, check the tally of the total tons delivered on each slip. Totaling the tonnages with data from Excel spreadsheets or other sources is only required when loads are split between projects or item numbers, or when an adjustment to the total on the slip must be made. A note should be made whenever the slip tonnage is not the pay tonnage total. Record Book entries should show slip numbers with a date and total tonnage used and paid as shown on the slip.

Slips prepared by the Paving Contractor or Subcontractor must be made out in an acceptable manner and contain the following information regarding the bituminous pavement delivery:

## o Type of material being delivered

- o Paving Contractor
- Project for which shipment is scheduled
- o Date
- Delivery truck identification
- o Gross, tare, and net weights

The weigher's signature from an individual authorized to perform the duties of a weigher is also required if material is being obtained from a conventional plant.

# Drainage

For drainage operations, the bound field notebook should be set up to accommodate computations directly in this book. Some pages should be left blank in the back of the book for additional notes and computations. The totals as computed should be transferred directly to the appropriate Record Book item summary page made out for each item and cross—referenced.

When the computations become too extensive, such as with various breakdowns of common and rock structure excavation, the notes may be carried to a Record Book page or a cross–section roll and computed there with proper cross–referencing.

Record all measurements necessary to the plotting of structures on the Record Plans, such as offsets from centerline, flow line elevations at outlets and inlets, etc. Record swing ties to ends of all conduits, buried pipe sleeves, water gates, service boxes, etc. Locate these items by centerline stations, but use other permanent features for tie points. For projects with coordinate points, the coordinates may also be useful.

Diagrams of related structures on each field notebook page are not required, but may be used if needed for clarity. When used, diagrams shall show the items on that page in solid lines, and related structures recorded elsewhere shown in dotted lines with the page number indicated.

For excavation more than 9 ft deep, common structure excavation will be measured and paid. Refer to *Subsection 903.3* of this Manual for a diagram of pipe pay limits.

When boulders are encountered in excavating for any structure, note in what class of excavation they were found. Refer to *Subsection 206.4.1.1* of the <u>Standard Specifications</u> for further clarification. Boulders from the subsidiary portion are not deductible from common structure excavation. Other boulders are deductible from common excavation.

If widened ditches are added, plot the design of the ditches on cross-sections of Record Plans and note how the pay limits are to be defined. When conditions necessitate non-standard end structures, submit complete dimensioned sketches with computations.

## • Granite Curb

Measurements for granite curb, fencing, and other items paid for by the foot should also be recorded and totaled in the bound field books. Page totals for these measurements should then be transferred directly to the Record Book item summary page.

Maintain an inventory of reset curb quantities and the location where reset curb was used. Keep new and reset curb runs separate.

# • Uniformed Officers and Flaggers

Generate a Uniformed Officer and Flagger Time Report that includes the names of the workers and the time worked daily. The Contractor should use a similar report to be given to the Contract Administrator at the end of each day or week. The two reports together provide a check and balance system for verifying police invoices and flagger hours actually worked.

The use of officer and flagger personnel should be requested and scheduled by the Contractor. However, the Contract Administrator should work closely with the Contractor to verify that the appropriate traffic control coverage is provided on the project.

Payment for uniformed officers is made by invoice plus a 5% mark—up as per *Subsection* 618.5.1 of the <u>Standard Specifications</u>. Payment for flaggers is made based on the authorized hours specified in *Subsection* 618.5.2.

## • Loam and Humus

Loam and humus quantity measurements should be recorded, computed, and totaled in the bound field notebooks or on separate computation pages in the Record Book. Page totals should be transferred directly to the Record Book item summary page where a total quantity is compiled.

#### Mulch

Measurements for mulch quantities should be recorded and computed in a bound field notebook or on separate computation pages in the Record Book. Individual page totals should then be transferred to the Record Book item summary page where the total quantity is compiled. Slope measurements recorded in the field notebooks or on separate computation pages in the Record Book should be computed in acres or square yards as required.

## Miscellaneous

Division 800

Entries made in the Record Book and in the bound field notebooks should only be made with light and dark red pencil. All other colors are reserved for use by the Engineering Audit Section.

Referencing and cross-referencing are an essential part of maintaining complete records. Always indicate information sources as well as the forwarding location of any information disseminated to other parties.

There are many items that were not included in the previous descriptions. However, most of these items can be treated in a manner similar to the items illustrated. Although it is left to the judgment of the Contract Administrator to adapt this system to unusual items, this system should be used as much as possible for the sake of uniformity. In the case of unusual items, the Engineering Audit Section should be consulted for the proper procedure to document their use.

### SECTION 807 – SAMPLE RECORD BOOK

Samples of acceptable methods of record keeping for construction projects are shown on the following pages. In addition to these samples, additional instructions on some specific record keeping requirements are included in this section. File names of available digital files are so indicated.

Road and bridge records shall be combined into one Record Book. The table of contents that follows outlines the page numbering system. This system is required for consistency.

### 11. Policy on Subcontracting (RB Page 9.01)

#### **Policy on Subcontracting**

Subcontract work proposed to be authorized by the Department can only be initiated and requested by the prime (principal) contractor. Authorization of a subcontract operation is provisional and does not imply Departmental recognition of the subcontractor, nor attest to their skill, experience, or ability to perform such work. No contractual relationship between the Department and a subcontractor is created thereby.

The Prime Contractor shall perform with its own organization contract work amounting to not less than 50% of the total original contract price. "Its own organization" shall be construed to include only workers employed and paid directly by the Prime Contractor and equipment owned or rented by the Prime Contractor, with or without operators.

In extending authorization, the Department does not waive its responsibility, or that of the Prime Contractor, for carrying out every procedure to ensure compliance in all respects with the provisions of the Federal Aid Highway Act, State Law, local ordinances, and all regulations having jurisdiction. The Prime Contractor may be required to take over or complete the work of any subcontractor who fails to perform work on time or in a satisfactory manner.

Additionally, when such work involves a DBE, Department approval to substitute will be conditional upon a written release from the DBE. It is a condition of authorization that a subcontractor shall not again sublet any part of their work unless the Prime Contractor has obtained prior approval of the Department. Indicated subcontract authorization is tentative pending full compliance by the Prime Contractor with *Subsection 108.01* of the Standard Specifications for Road and Bridge Construction, entitled "Subletting of Contract" and/or Amendments to *Subsection 108.01* as may be included in the Contract Proposal.

The Prime Contractor shall retain responsibility to fulfill all requirements of the "Contract and Documents Included Therein," "Conditions of the Obligation of the Contract Bond," and any requirements as to workmanship or maintaining a working relationship with representatives of the Contract Administrator.

Page 1

### Policy on Subcontracting

The "Required Contract Provisions – Federal Aid Contracts" and the "Minimum Wage Rates" for labor as stated in the Contract Proposal and all other pertinent Federal requirements must be incorporated into each subcontract agreement and shall apply to labor performed on all work sublet, assigned, or otherwise disposed of in any way.

It is the Prime Contractor's responsibility to furnish to each material supplier, subcontractor or lower tier subcontractor all pertinent portions of the contract and to ensure that all contract requirements are carried out which pertain to that portion of the work assigned to or performed by others. This includes the payment of wages at rates not less than the applicable minimum, and all bills for labor, materials, and equipment as may be required in the Contract Documents.

Modifications to normal subcontracting procedures for emergency work, added work, and work incidental to acceptable construction methods, deemed to be in the best interest of the Department, will be subject to review by the Construction Bureau Administrator or appointed on a case—by—case basis.

Page 2

### 12. Inter-Departmental Communication (RB Page 10.00)

State Of New Hampshire / Department Of Transportation						
	Inter-Departmental Communication					
From:	John Smith, PE Chief of Final Design					
Date:	9/15/2015					
Location (Office):	Bureau of Highway De	esign				
Subject:	Laconia 99999					
То:	Ronald Tanner, PE Bureau of Construction					

**Memorandum**: The Bureau of Highway Design has reviewed your request to revise the proposed guardrail design for guardrail run No. 2, Sta. 1520+80-1522+40. Since the 4:1 slope now begins at 1522+00, instead of at 1522+25, we agree with shortening the proposed guardrail length by 25 ft.

### 13. Pit Agreement (RB Page 10.01)

State Of New Hampshire / Department Of Transportation					
Pit Agreement (1)					
Important: This form does not apply to commercial processing plants					
Project: Laconia Project No: 99999					
Pit (#) Name:	A.L. Jones	City/Town:	Rte. 106 Laconia		

This form sets forth the conditions under which the Department will approve material removal by a Contractor who, under contract as an agent of the Department, seeks to open and operate any pit for the lawful construction, reconstruction, or maintenance of a class I, II, III, IV, or V highway in accordance with RSA 155–E:2, IV and as specified in Section 106 of the New Hampshire Department of Transportation Standard Specifications for Road and Bridge Construction applicable to the referenced project.

By signature herein, the Contractor (agent) and the property owner(s) acknowledge and agree to the following conditions and specifications subject to Departmental approval:

- (1) Prior to the start of excavation, a copy of this agreement executed by the property owner(s), the Contractor, and the Department will be filed with the Regulator (as defined by RSA 155–E:1, III) within the municipality or unincorporated place in which the pit is located.
- (2) Prior to the start of excavation, the Contractor shall meet the requirements of RSA 155–E:2, IV(b) as follows:
- (a) The excavation shall comply with the operational and reclamation standards of RSA 155–E:4–a, RSA 155–E:5, and RSA-E:5–a.
- (b) The excavation shall not be within 50 ft of the boundary of a disapproving abutter or within 10 ft of the boundary of an approving abutter, unless requested by said approving abutter.
  - (c) The excavation shall not be unduly hazardous or injurious to the public welfare.
- (d) Existing visual barriers in the areas specified in RSA 155–E:3, III shall not be removed, except to provide access to the excavation.
- (e) The excavation shall not substantially damage a known aquifer, so designated by the United States Geological Survey.
  - (f) All required permits for the excavation should be obtained from state or federal agencies.
- (3) Exemptions from the provisions of local zoning or other applicable ordinances may be requested by the Contractor through local municipalities. When such request are denied, with respect to the excavation or transportation of materials being used exclusively for the lawful construction, reconstruction, or maintenance of a class I, II, or III highway, the Contractor may appeal directly through the Transportation Appeals Board per  $RSA\ 155-E$ : 2, IV(c).

RE: Laconia, NHS-018-2 (104), 99999

September 1, 2015

#### Gentlemen:

Conditional approval is hereby granted to open and operate a pit on the Adam Jones, Route 106, Laconia property, effective October 1, 2015, subject to the following stipulations:

Operation of the pit will be limited to referenced project and shall be in conformance to the "Pit Agreement Form" dated September 15, 2015.

It is understood that the property will be restored in accordance to the landscaping provisions of the above mentioned agreement.

A written release from the owner will be required for the Project Engineer's record prior to acceptance of the project.

It is mutually understood that this approval shall terminate upon completion of referenced project, anticipated to be November 1, 2015.

The approval hereby granted shall not supersede the authority of the Municipal Regulator given in RSA 155–E: 10, nor the provisions of RSA 155–E: 4 regarding prohibited projects.

The approval hereby granted is contingent upon and shall not relieve the contractor/property owner from obtaining State and Federal permits as may be required by, but not necessarily limited to, *RSA 149:8–a, RSA 483 A, Sect. 9* and *10* of the River and Harbor Act and *Section 404* of the Clean Water Act.

Your attention is directed to the Administrative Rules and Regulations *Part WS 415* implementing *RSA 149:8–a*. Compliance may require applicable permits if the pit is in or adjacent to surface waters of the State; or if the pit disturbs more than 2.5 acres of ground surface by excavation, topsoil removal or by other means.

Very truly yours,

[Gunnar Kelpie]

Gunnar Kelpie, P.E.

# 15. Disposal Agreement (RB Page 10.04)

State Of New Hampshire / Department Of Transportation					
Disposal Agreement (1)					
Important: This does not apply to disposal areas operated by a public agency					
ProjectLaconia					
This form sets forth the conditions under which the Department will approve the disposal of surplus or waste material by a Contractor who, under contract as an agent of the Department, seeks to open and operate a disposal site on the referenced property in accordance with <i>Sections 106, 201</i> and <i>203</i> of the New Hampshire Department of Transportation Standard Specifications for Road and Bridge Construction applicable to the referenced project.					
By signature herein, the Contractor (agent) and the property owner(s) acknowledge and agree to the following conditions and specifications subject to Departmental approval:					
(1) Prior to the start of disposal operations, this agreement shall be executed by the Contractor, the property owner(s), and the Department's Contract Administrator, with written approval received from the Department.					
(2) The Contractor shall not dispose of material considered to be hazardous or injurious to public welfare, including contaminated soils and asbestos, except as permitted by federal, state, and local regulations. Solid waste shall be disposed of according to all federal, state, and local regulations.					
(3) Prior to the start of disposal operations, the Contractor shall complete a Historic and Archaeological Resources certification in accordance with the Contract, for areas affected by the disposal or by any haul road constructed for access to the disposal area.					
(4) Prior to the start of disposal operations, the Contractor shall investigate impacts on existing wetlands by arranging for a qualified person recognized by the Department of Environmental Services (NHDES) capable of performing such an investigation. The Contractor shall apply for, and receive from the NH Wetlands Bureau, any wetlands permit(s) required prior to the start of disposal operations.					
(5) Pursuant to Executive Order 11988, dated May 24, 1977, the Contractor shall not dispose of materials within the boundaries of any floodway, or within the limits of any 100 year floodplain, or within any area that violates Executive Order 11988 without the expressed written permission of appropriate federal, state, and local agencies. It shall be the responsibility of the Contractor to ascertain and mark the boundaries of such floodway and floodplain using available information from federal, state, and local resources.

Disposal Agreement (2)				
Important: This does not apply to disposal areas operated by a public agency				
ProjectLaconia Project Number(s)99999 Property Owner(s)L.M. Moody Location61 Highland St				
(6) Approval by the Department to open and operate the disposal area will expire at the specified or extended completion date of the project. Access roads to the area adjacent to highways shall be obliterated unless permission is given by the Department to preserve such access roads. If the Contractor has removed screening trees and brush between the highway and the disposal area, the area shall be replanted to provide a similar screen in a zone along the edge of the disposal area as directed by the Department.				
(7) Disposal or transportation of material by the Contractor shall not be exempt from local zoning or other applicable ordinances. The Contractor shall apply directly to local municipalities for possible exemptions to such ordinances.				
(8) Disposal of brush from clearing and grubbing operations shall be as specified in Section 201 of the Standard Specifications. Disposal of surplus and waste material from roadway excavation shall be as specified in Section 203 of the Standard Specifications. Reclamation of the disposal area shall meet the requirements of RSA 155–E:5, I, II, III, IV, and V (for excavation sites) prior to Project Acceptance.				

### 16. Required Minimum Landscaping Treatment (RB Page 10.05)

#### State Of New Hampshire / Department Of Transportation

#### **Required Minimum Landscaping Treatment (1)**

Prior to acceptance of the project, the Contractor shall finish the disposal area in accordance with the noted RSAs and applicable specifications. By the box(es) checked below, the property owner(s), the Contractor, and the Department's Contract Administrator shall agree on the specific minimum landscaping treatment required in order for the reclamation to be acceptable to the Department:

[X] The entire area is to be fertilized and seeded.							
[ ] The entire area is to be planted with seedlings.	] The entire area is to be planted with seedlings.						
[ ] Part of the area is to be seeded and the remaind	[ ] Part of the area is to be seeded and the remainder planted with seedlings as agreed below.						
Seedlings shall be							
(Age or size, species, variety)							
Planted 8 feet center to center, or (Spacing).

Landscaping provisions approved by:	Ronald Tanner	_9/1/2015					
	NHDOT Contract Administrator	Date					

**Note**: The Contractor's attention is directed to *RSA 482–A:3*, the requirements of which must be fulfilled if this disposal area involves excavation or dredging of wetlands. Furthermore, the Contractor's attention is directed to *RSA 483–B* and *RSA 485–A:17*, the provisions of which must be fulfilled if this disposal operation involves filling on the border of the surface waters of the state or will significantly alter the characteristic natural runoff or create an unnatural runoff, and *RSA 149–M* if the Contractor intends to dispose of solid waste, including stumps. The Contractor's attention is also directed to *Section 10* of the Rivers and Harbors Act of 1899, and *Section 401 and 404* of the Clean Water Act, for which compliance may require a permit for work in or affecting "navigable waters of the U.S.," or material placed in "waters of the U.S.," including wetlands. The Contractor's attention is also directed to Executive Order *11990* if this disposal area will affect wetlands.

#### 17. Approval for Disposal Area (RB Page 10.06)

### Approval for Disposal Area

Plow Brothers, Inc P.O. Box 3 Concord, NH 03301

RE: Laconia, NHS-018-2 (104), 99999

September 1, 2015

#### Gentlemen:

Conditional approval is hereby granted to open and operate a disposal area on the L.M. Moody property, subject to the following stipulations:

Operation of the disposal area will be limited to referenced project and shall be in conformance to the "Disposal Agreement" form dated May 15, 2015.

It is understood that the property will be restored in accordance to the landscaping provisions of the above mentioned agreement.

A written release from the owner will be required for the Contract Administrator's records prior to acceptance of the project.

It is mutually understood that this approval shall terminate upon completion of referenced project, anticipated to be November 30, 2015.

The approval hereby granted is contingent upon and shall not relieve the contractor/property owner from obtaining State and Federal permits as may be required by, but not necessarily limited to, RSA 149:8–a, RSA 149–M, RSA 483–A, Sections 9 and 10 of the River and Harbor Act and Section 404 of the Clean Water Act.

Your attention is directed to the Administrative Rules and Regulations *Part WS 415* implementing *RSA 149:8–a*. Compliance may require applicable permits if the area is in or adjacent to surface waters of the State; or if the area disturbs more than 2.5 acres of ground surface by excavation, topsoil removal or by other means.

At present, the Waste Management Division requires that a permit (RSA 149–M:10) be obtained for all stump disposal sites.

Very truly yours,
[Gunnar Kelpie]
Gunnar Kelpie, P.E.

The work and materials to extract, relocate, and extend the casings would be added work to the contract and are compensable under this item.	drilled shaft installations due to differing site conditions.  REASON: The permanent casings for the drilled shaft installations at Pier 1 were ordered based on estimated ledge elevations given in the project plans. During the installation of these casings, it was discovered that the actual ledge elevations at pier 1 are approximately 10 ft lower than originally estimated. As a result, the permanent casings ordered at Pier 1 are not long enough to complete the drilled shaft installation. It has been determined that the permanent casings can be relocated, so that only the casing at Pier 1 East will need to be extended with a spliced extension. This will require the 37.1 it casing originally located at Pier 1 East be relocated to Pier 1 Center. The 31.2 ft casing originally at Pier 1 Center will be relocated to Pier 1 West. And the 27.2 ft casing originally located at Pier 1 West will be moved to Pier 1 East where it will be extended with a 15 ft spliced on section. The work and materials to extract, relocate, and extend the casings would be added work to the contract and are compensable
REASON: The permanent casings for the drilled shaft installations at Pier 1 were ordered based on stimated ledge elevations given in the project plans. During the installation of these casings, it was liscovered that the actual ledge elevations at pier 1 are approximately 10 ft lower than originally stimated. As a result, the permanent casings ordered at Pier 1 are not long enough to complete the irilled shaft installation. It has been determined that the permanent casings can be relocated, so that only the casing at Pier 1 East will need to be extended with a spliced extension. This will require the 37.1 to casing originally located at Pier 1 East be relocated to Pier 1 Center. The 31.2 ft casing originally at the case of the pier 1 West. And the 27.2 ft casing originally located at Pier 1 West will be moved to Pier 1 East where it will be extended with a 15 ft spliced on section. The work and materials to extract, relocate, and extend the casings would be added work to the contract and are compensable under this item. 24. Change Order – 4 (RB Page 13.04)

### STATE OF NEW HAMPSHIRE DEPARTMENT OF TRANSPORTATION BUREAU OF CONSTRUCTION

September 30, 2010

ENGINEER'S ESTIMATE \*
FOR DOCUMENTATION
Change Order # 7

Newington-Dover	A000(999)	11238L
Project Name	Federal No.	State No.
Cost Breakdown Assumptions:		
Material: 25%		
Fabrication: 15%		
Galvanizing: 25%		1
Powder Coating: 25%		1
Installation: 10%		<u> </u>
Assuming 25% reduction in price due to eli	mination of nowder-coating	
\$500 x 0.25 = \$125/lf		
\$500 - \$125 = \$375.00/lf = estimated price	for tail without powder coa	ting
Contractor's price of \$392.95/If is ok.		<del></del>
		1

### 25. General Notes (RB Page 14.00)

General Notes

203.6 Embankment-in-place:

SB 1532+00+/– Lt. A pipe inlet was discovered in a bowl area at the toe of slope and no outlet could be found. R. Tanner ordered the inlet area to be filled with roadway excavation obtained from either side of the bowl to form a ditch such that the hole would be filled and water would run past the filled area into a pipe located at SB 1530+25+/– Lt. See RN1–6.

609.5 Reset Granite Curb

Existing reset curb did not exist from SB 1425+04 – SB 1430+04 Rt. (minus 500 ft)

Required an addition of 609.01 Straight Granite Curb (plus 500 ft)

Drainage – 1

Several existing metal drainage pipes to be replaced were excavated and found to be in excellent condition. It was determined that any rust damage that had occurred was located in the area of the catch basin and that 6 to 8 feet away from the basin the pipe looked like new. The decision was made by R. Tanner not to replace any pipe runs that were not showing signs of salt damage at the basin and if they were, to only replace the portion of the run that was showing signs of damage.

Drainage – 2

Rock Structure Excavation quantities were lower than plan because design had underdrain pipes in the ledge cuts at 9 ft when actual depths were  $\pm$  6 ft.

Page 1

General Notes

Drainage – 3

Drainage runs #35 and #41 replaced 30 in pipe not shown on the plans (see change order #6).

Drainage – 4

Aggregate underdrain was added to the project to solve an icing problem maintenance was having in the ditch line NB Rt. Sta. 1645+00 to 1653+00 (See added Drainage runs #A9, A10, A11, and A38).

**Note:** In the absence of any general notes there shall be a note stating so.

**Note**: Contract Administrators are advised to review the contract for the specific requirements for OJT on their projects. These requirements can vary greatly and may require close supervision by the Contract Administrator to ensure the trainee is properly trained. The Contract Administrator should contact Labor Compliance and request a current copy of the "OJT Training Manual" for additional information.

62. On-the-Job Training - Acknowledgement and Statement of Intent (RB Page 194.02)

New Hampshive Department of Transportation
ON-THE-JOB TRAINING
ACKNOWLEDGEMENT AND STATEMENT OF INTENT
Date:
To: External EEO Coordinator
Office of Labor Compliance / New Hampshire Department of Transportation
P.O. Box 483, 1 Hazen Drive / Concord, NH 03302-0483
Project Name and Number:
[Company] has reviewed the OJT training requirements (Training Special Provisions) stated in the contract for the above noted project. Based on these requirements, the availability of applicants within a reasonable area of recruitment, and in an effort to meet the minority and female participation goals outlined in the contract (Affirmative Action Requirements, 41 CFR 60–4.2, Solicitations), our company will select a qualified trainee(s) and conduct training under the classification(s) identified below in accordance with [Name of OJT Program]
<b>Note</b> : A copy of the training program (training classification) to be used if it is other than the NHDOT OJT Program must be submitted to the External EEO Coordinator.
The undersigned has personally reviewed the content of each selected training classification in relation to the project scope and assures that all portions of training can be completed if initiated by the "no later than" (NLT) date indicated on the following page.
Page 1
